

Universitatea Tehnică din Cluj-Napoca
Facultatea de Inginerie Electrică

Cap.5

IMPLEMENTARE INTERFETE GRAFICE- FORMULARE HTML5

Curs: PIGMC, Master an II, sem I

CUPRINS

- 5.1.** Introducere
- 5.2.** Formulare web
- 5.3.** Elemente formulare
- 5.4.** Instrumente on line pentru formulare web

5.1. Introducere

Exemple formulare on line/web

Fixed steps will apply in the input field.
Quantity: Trimite
Note: type="number" is not supported in IE9 and earlier.

Numeric restrictions will apply in the input field:
Quantity (between 1 and 5): Trimite
Note: type="number" is not supported in IE9 and earlier.

Points: Trimite
Note: type="range" is not supported in Internet Explorer 9 and earlier versions.

5.1. Introducere

Instrumente pentru realizarea formularelor

Formulare web: documente web dinamice realizate utilizand limbaje de programare (scripting) sau instrumente on line.

I. Instrumente de programare utilizand :

a) CGI (Common Gateway Interface) scripts:

- Perl, Python, C/C++/C#, Visual Basic, ASP, Unix Shell

b) Limbaje pentru programarea web:

- HTML, CSS
- JavaScript, VBScript (client side)
- PHP, JSP, ASP, etc. (server side)

II. Instrumente online

5.2. Formulare web

a) CGI script:

- 1 - clientul completeaza campurile unui formular
- 2,3 - serverul trimite formularul pentru procesare, catre un interpretor de scripturi
- 4 - se acceseaza baza de date de pe discul serverului
- 5 - se proceseaza datele din formular
- 6 – CGI genereaza o pagina HTML cu raspunsul cererii
- 7,8 – pagina web cu rezultatul formularului este afisata

5.2. Formulare web

b) Limbaje pentru programarea web: presupune includerea unor scripturi in interiorul paginilor HTML

Avantaje:

- mai simplu de realizat decat implementarea unui script CGI
- unele sunt open source, gratuite:
 - Server side: PHP , JSP
 - Client side: JavaScript

5.2. Formulare web

b) Limbaje pentru programarea web:

Limbaje de script:

a) Scripturi care se execută la nivel de browser:

- JavaScript
- VBScript

b) Scripturi care se execută la nivel de server:

- PHP
- JSP
- ASP

5.3. Formulare in HTML & PHP

Caracteristici formulare:

- se creeaza cu **Form** si se pot include in orice document HTML
- contin **elemente de control** : **Form Control/Elements** (butoane, checkbox, text field, butoane radio, meniuri drop-down, etc.)
- informatiile sunt stocate in **campuri** : **Field** ca si **Field Value**.
- contin un buton **Submit** pentru trimiterea informatiilor din formular catre server

5.3. Formulare in HTML & PHP

Elemente formulare:

- ❑ **Input Boxes** : pentru date de tip text sau numerice
- ❑ **Butoane selectie (butoane Radio)**: pentru selectarea unei singure optiuni dintr-o lista predefinita
- ❑ **Lista selectie**: pentru liste de optiuni tip **Drop-Down List Box**
- ❑ **Check Boxes**: specifica DA sau NU
- ❑ **Casete text (Text Areas)**: pentru text pe mai multe linii

5.3. Formulare in HTML & PHP

Sintaxa formular HTML:

...

<form> - inceput formular

<input> - solicita informatie ce trebuie completata in formular

...

<input> - se pot include oricate **<input>**

</form> - inchidere formular HTML

...

5.3. Elemente formulare

= new in HTML5.

Tag	Description
<code><form></code>	Defines an HTML form for user input
<code><input></code>	Defines an input control
<code><textarea></code>	Defines a multiline input control (text area)
<code><label></code>	Defines a label for an <code><input></code> element
<code><fieldset></code>	Groups related elements in a form
<code><legend></code>	Defines a caption for a <code><fieldset></code> element
<code><select></code>	Defines a drop-down list
<code><optgroup></code>	Defines a group of related options in a drop-down list
<code><option></code>	Defines an option in a drop-down list
<code><button></code>	Defines a clickable button
<code><datalist></code>	Specifies a list of pre-defined options for input controls
<code><keygen></code>	Defines a key-pair generator field (for forms)
<code><output></code>	Defines the result of a calculation

Exemplu: Tipuri elemente formular

Enter Contact Information

The diagram shows a contact form with the following fields and annotations:

- Name:** (placeholder attribute, required attribute)
- E-Mail:**
- Phone:**
- Website:**
- Birthdate:**
- Quantity Attending:**
- Pattern:** (pattern attribute)
- Range:**
- Hair color:**
- Select photo images:** (input type file) and
- Search:**
- Submit:**

Element `<input>`

type `"text"`, `"radio"` sau `"submit"`

Tipuri de baza `<input>`

Type	Description
<code><input type="text"></code>	Defines a one-line text input field
<code><input type="radio"></code>	Defines a radio button (for selecting one of many choices)
<code><input type="submit"></code>	Defines a submit button (for submitting the form)

Sintaxa element `<input>`: `"text"`

```
<input type="text" name="textfield" size="value" value="initial value">
```

Obs.: **implicit size =20 caractere, daca nu se specifica alt nr.**

Ex. 1: Casuta text cu numele "text1" de lungime 30 caractere

```
<input type="text" name="text1" size="30">
```

Ex. 2: Casuta text cu numele "text2" de lungime 30 caractere maxim 20 caractere introduse.

```
<input type="text" name="text2" size="30" maxlength="20">
```

Ex 3: Casuta text cu numele "text3" de lungime 40 caractere cu valoare implicita completata "Cluj".

```
<input type="text" name="text3" size="40" value="Cluj">
```

Exemplu element <input>: "text"

<pre><!DOCTYPE html> <html> <body> <h2>HTML Forms</h2> <form > First name:
 <input type="text" name="firstname">
 Last name:
 <input type="text" name="lastname">

 <input type="submit" value="Submit"> </form> </body> </html></pre>	<h3>HTML Forms</h3> <p>First name: <input type="text"/></p> <p>Last name: <input type="text"/></p> <p><input type="submit" value="Submit"/></p>
-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	---------------------------------------------------------------------------------------------------------------------------------------------------------

!! Implicit size =20 caractere

Exemplu element <input>: "text"

<pre><!DOCTYPE html> <html> <body> <h2>HTML Forms</h2> <form > First name:
 <input type="text" name="firstname" value="Grindei">
 Last name:
 <input type="text" name="lastname" value="Laura">

 <input type="submit" value="Trimite"> </form> </body> </html></pre>	<h3>HTML Forms</h3> <p>First name: <input type="text" value="Grindei"/></p> <p>Last name: <input type="text" value="Laura"/></p> <p><input type="submit" value="Trimite"/></p>
------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

+text implicit (value)

Exemplu element <input>: "text"

<pre><!DOCTYPE html> <html> <body> <h2>HTML Forms</h2> <form > First name:
 <input type="text" name="firstname" size="30" maxlength="20" value="Grindei">
 Last name:
 <input type="text" name="lastname" size="30" maxlength="20" value="Laura">

 <input type="submit" value="Submit"> </form> </body> </html></pre>	<h3>HTML Forms</h3> <p>First name: <input type="text" value="Grindei"/></p> <p>Last name: <input type="text" value="Laura"/></p> <p><input type="submit" value="Submit"/></p>
--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

+ size =30, +maxlength=20

Sintaxa element <input>: "password"

<input type="password" name="parola" >

<pre><!DOCTYPE html> <html> <body> <h2>HTML Forms</h2> <form> Utilizator (email):
 <input type="text" name="user">
 Parola:
 <input type="password" name="parola">

 <input type="submit" value="Login"> </form> </body> </html></pre>	<h3>HTML Forms</h3> <p>Utilizator (email): <input type="text" value="grindei"/></p> <p>Parola: <input type="password" value="....."/></p> <p><input type="submit" value="Login"/></p>
-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Sintaxa element <input>: “radio”

<input type="radio" name="radiobutton" value="myValue1" checked >

<pre><!DOCTYPE html> <html> <body> <h2>Radio Buttons</h2> <form> <input type="radio" name="gender" value="male" checked> Masculin
 <input type="radio" name="gender" value="female"> Feminin
 <input type="radio" name="gender" value="other"> Alt gen </form> </body> </html></pre>	<h3>Radio Buttons</h3> <ul style="list-style-type: none"><input type="radio"/> Masculin<input type="radio"/> Feminin<input type="radio"/> Alt gen
--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Sintaxa element <input>: “Submit”

<input type="submit" value="text" >

<pre><!DOCTYPE html> <html> <body> <h2>HTML Forms</h2> <form> Utilizator (email):
 <input type="text" name="user">
 Parola:
 <input type="text" name="parola">

 <input type="submit" value="Login"> </form> </body> </html></pre>	<h3>HTML Forms</h3> <p>Utilizator (email): <input type="text"/></p> <p>Parola: <input type="text"/></p> <p><input type="submit" value="Login"/></p>
---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-------------------------------------------------------------------------------------------------------------------------------------------------------------

Atribute formulare

Atributul action: defineste actiunea la Submit care implicit trimite datele din formular la server printr-un fisier care contine instructiuni (ex. De mai jos: "post.php")

```
<form method="post" action="post.php">
```

Atributul Method : "get" (implicit) sau "post"

- ❑ **"get":** pentru nr limitat de date si date insensitive
- ❑ **"post":** pentru nr nelimitat de date inclusiv date secrete(parole)

```
<form method="get" action="post.php">
```

```
<form method="post" action="post.php">
```

Atribute formulare

Ex: Fisierul "login.html" si fisierul "post1.php" trebuie create si salvate pe server.

```
login - Notepad
File Edit Format View Help
<!DOCTYPE html>
<html>
<body>
<form method="post" action="post1.php">
  Utilizator (email):<br>
  <input type="text" name="user">
  <br>
  Parola:<br>
  <input type="password" name="parola">
  <br><br>
  <input type="submit" value="Login">
</form>
</body>
</html>
```

```
post1 - Notepad
File Edit Format View Help
<?php
echo "user:", $_POST['user'];
echo "<br/>";
echo "parola:", $_POST['parola'];
?>
```

Utilizator (email):
laura

Parola:
.....

Login

user:laura
parola:laura2018

Atributul name: se specifica pentru fiecare element <input>. Daca lipseste=>datele corespunzatoare acelu element nu se afiseaza/trimit la server

The screenshot shows a Notepad window with the following HTML code:

```
<!DOCTYPE HTML>
<html>
<body>
<form>
Nume: <input type="text" name="nume"><br>
<br>
Prenume: <input type="text" name="prenume"><br>
<br>
<input type="submit" value="Trimite">

```

The browser rendering shows the form with the following states:

- Initial state:** Nume: [] Prenume: [] Trimite
- Dupa completare:** Nume: Popa Prenume: Mircea Trimite
- Dupa click Trimite:** The form is submitted, and the browser address bar shows: `D:/laura/cursuri/CursPIGMC/2017-2019/Lab/FORMS/formsimplu.html?nume=Popa&prenume=Mircea`

Element <input type>: "reset"

The screenshot shows the HTML code for a form with a reset button:

```
<!DOCTYPE html>
<html>
<body>

<h2>Butonul reset </h2>
<p>reseteaza toate valorile formularului
<br>la valorile implicite</p>
<form>
First name:<br>
<input type="text" name="firstname"
value="Grindei">
<br>
Last name:<br>
<input type="text" name="lastname"
value="Laura">
<br><br>
<input type="submit" value="Submit">
<input type="reset" value="Reset">
</form>
</body>
</html>

```

The browser rendering shows the form with the following elements:

- Butonul reset:** A section header and a paragraph explaining that the reset button resets all form values to their default values.
- Form fields:** First name: Grindei, Last name: Laura
- Buttons:** Submit, Reset

Element `<textarea>`

defineste o caseta formata din mai multe linii text

Dupa completare

```
<!DOCTYPE html>
<html>
<body>
<h2>Textarea</h2>
<form >
  <textarea name="message" rows="5" cols="30">
    Cursuri:</textarea>
  <br>
  <input type="submit" value="Trimite">
</form>
</body>
</html>
```

Elemente `<fieldset>` si `<legend>`

`<fieldset>` permite gruparea datelor intr-o caseta

`<legend>` adauga un titlu datelor grupate

```
<!DOCTYPE html>
<html>
<body>
<form>
<fieldset>
<legend>Date Personale:</legend>
Nume: <input type="text"><br><br>
Prenume: <input type="text"><br><br>
Adresa: <input type="text"><br><br>
<input type="submit" value="Trimite">
</fieldset>
</form>
</body>
</html>
```

Date Personale: —

Nume:

Prenume:

Adresa: Trimite

Dupa completare

Date Personale: —

Nume: Grindei

Prenume: Laura

Adresa: Str. Baritiu 26, Cluj Napoca Trimite

Element <select>

defineste o **lista expandabila** (drop-down list)

```
<!DOCTYPE html>
<html>
<body>
<h2>Exemplu de lista de selectie</h2>
<p>Selectati un curs din lista:</p>
<form >
  <select name="cursuri">
    <option value="TC">Teoria Circuitelor</option>
    <option value="MAT">Matematica</option>
    <option value="CHI">Chimie</option>
    <option value="RM">Rezistenta Materialelor</option>
  </select>
  <br><br>
  <input type="submit" value="Trimite">
</form>
</body>
</html>
```

Trimite

Elemente preselectate cu **selected** in <select>: defineste elementul preselectat dintr-o lista expandabila (drop-down list)

```
<!DOCTYPE html>
<html>
<body>
<h2>Exemplu de lista de selectie</h2>
<p>Selectati un curs din lista:</p>
<form >
  <select name="cursuri">
    <option value="TC" >Teoria Circuitelor </option>
    <option value="MAT" selected>Matematica</option>
    <option value="CHI">Chimie</option>
    <option value="RM">Rezistenta Materialelor</option>
  </select>
  <br><br>
  <input type="submit" value="Trimite">
</form>
</body>
</html>
```

Exemplu de lista de selectie

Selectati un curs din lista:

Matematica

Trimite

Elemente `<input list>` `<datalist>`

specifica o lista de optiuni predefinite pentru un element `<input>`

```
<!DOCTYPE html>
<html>
<body>

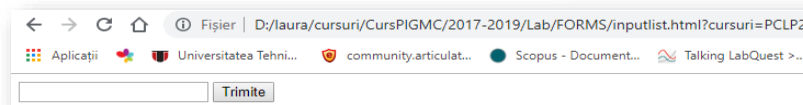

<form >
  <input list="cursuri" name="cursuri">
  <datalist id="cursuri">
    <option value="Teoria Circuitelor">
    <option value="PCLP1">
    <option value="PCLP2">
    <option value="Matematica">
    <option value="Fizica">
  </datalist>
  <input type="submit">
</form>
</body>
</html>
```

Teoria Circuitelor
PCLP1
PCLP2
Matematica
Fizica

Selectie

PCLP2 Trimite

Dupa selectie

Element `<button>`

defineste un buton actionat cu click

```
<!DOCTYPE html>
<html>
<body>
<h2>The Button Element</h2>
<button type="button"
onclick="alert('Buna seara dragi
studenti!')">Click Me!</button>
</body>
</html>
```

The Button Element

Click Me!

Raspuns dupa click pe butonul "Click Me!": afisarea unei ferestre pop-up

Buna seara dragi studenti!

OK

Element `<input <keygen>`

ofera posibilitatea de a autentifica utilizatorii specificand un camp cu o pereche de chei (una privata memorata local si una publica trimisa la server)

<pre><!DOCTYPE html> <html> <body> <form action="action_page.php"> Username: <input type="text" name="user">

 Encryption: <keygen name="security">

 <input type="submit"> </form> </body> </html></pre>	<p>Username: <input type="text" value="Laura"/></p> <p>Encryption: <input type="text" value="2048 (nivel ridicat)"/></p> <p><input type="button" value="Trimite"/></p>
-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	------------------------------------------------------------------------------------------------------------------------------------------------------------------------

Tipuri noi `<input>` in HTML 5:

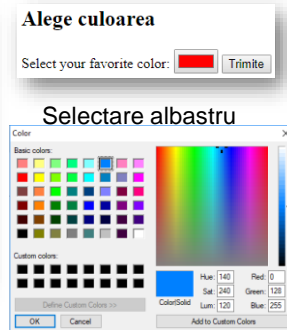

- color
- date
- datetime
- datetime-local
- email
- month
- number
- range
- search
- tel
- time
- url
- week

Element `<input>`: "color" defineste un camp de tip culoare

```
<!DOCTYPE html>
<html>
<body>

<h2>Alege culoarea</h2>
<form >
  Select your favorite color:
  <input type="color" name="favcolor" value="#ff0000">
  <input type="submit">
</form>
</body>
</html>
```

Dupa selectare

Element `<input>`: "date" defineste un camp de tip data calendaristica

```
<!DOCTYPE html>
<html>
<body>

<h2>Input data calendaristica</h2>
<form>
  Birthday:
  <input type="date" name="bday">
  <input type="submit">
</form>
</body>
</html>
```

Dupa introducere data calendaristica

Element `<input>`: "number" "min" "max"

defineste un camp de tip numeric cu o restrictie tip interval

```
<!DOCTYPE html>
<html>
<body>
<h2>Input numeric intr-un interval</h2>
<form >
  Cantitate (intre 1 and 5):
  <input type="number" name="quantity" min="1" max="5">
  <input type="submit">
</form>
</body>
</html>
```

Input numeric intr-un interval

Cantitate (intre 1 and 5): Trimite

Input numeric intr-un interval

Cantitate (intre 1 and 5): Trimite

Dupa selectare

Element `<input>`: "number" "min" "max"

defineste un camp de tip numeric cu o restrictie tip interval

Daca se introduce o **valoare invalida** se afiseaza :

Input numeric intr-un interval

Cantitate (intre 1 and 5): Trimite

! Valoarea trebuie să fie mai mică sau egală cu 5.

```
<!DOCTYPE html>
<html>
<body>
<h2>Input numeric intr-un interval</h2>
<form >

</html>
```

Search Google:

Dupa selectare+ click Trimite

Search Google:

Element `<input>`: "file"

Upload un fisier

```
<!DOCTYPE html>
<html>
<body>
<h1>Input fisier (upload)</h1>
<h3>Un singur fisier</h3>
<form>
  Selecteaza fisierul: <input type="file" name="myFile">
<br><br>
  <input type="submit" value="Trimite">
</form>
</body>
</html>
```

Input fisier (upload)

Un singur fisier

Selecteaza fisierul: forminscriere.docx

```
<!DOCTYPE html>
<html>
<body>
<h1>Input fisiere (upload)</h1>
<h3>Mai multe fisiere</h3>
<form >
  Selecteaza mai multe fisiere: <input type="file"
  name="myFile" multiple><br><br>
  <input type="submit">
</form>
</body>
</html>
```

Input fisiere (upload)

Mai multe fisiere

Selecteaza mai multe fisiere: 2 fisiere

Restricții pentru elementele <input>:

Attribute	Description
disabled	Specifies that an input field should be disabled
max	 Specifies the maximum value for an input field
maxlength	Specifies the maximum number of character for an input field
min	 Specifies the minimum value for an input field
pattern	 Specifies a regular expression to check the input value against
readonly	Specifies that an input field is read only (cannot be changed)
required	 Specifies that an input field is required (must be filled out)
size	Specifies the width (in characters) of an input field
step	 Specifies the legal number intervals for an input field
value	Specifies the default value for an input field

5.4. Instrumente on line pentru formulare web

- <https://www.google.com/drive/> (formulare on line)
- <http://www.formulareonline.ro/> (formular de contact, chestionar, formular de comanda)
- <http://smartworks.3x.ro/cv/index.php> (CV)
