

## Cap.7

# IMPLEMENTARE INTERFETE GRAFICE CU BAZE DE DATE. LIMBAJUL PHP

### SBD cu arhitectura client-server

Arhitectura client-server a SBD: model cu 2 componente distincte:

- Server (backend): are instalate SGBD-ul și BD; procesează și returnează rezultatul cererilor de la clienți
- Client (frontend): are instalate programe de aplicație:
  - un program „dedicat” (specific BD) sau
  - un browser (Chrome, Internet Explorer, etc): interacționează cu BD printr-o interfață software (HTML + PHP, ASP, Java, JavaScript, VBScript, etc...)

Configurații client – server

- a) un singur client și un singur server
- b) mai mulți clienți și un singur server
- c) mai mulți clienți și mai multe servere

## Configurații Client - Server

(a)

a) un singur client și un singur server

b) mai mulți clienți un singur server

c) mai mulți clienți mai multe servere

## Arhitectura client-server & aplicații web

## FUNCTII CLIENT - SERVER

<i>Client</i>	<i>Server</i>
Administrează interfața cu utilizatorul	Primește și procesează cerințele clienților pentru baza de date
Acceptă și verifică sintaxa intrărilor utilizatorilor	Verifică autorizarea
Procesează aplicațiile	Asigură respectarea constrângerilor de integritate
Generează cerințele pentru baza de date și le transmite serverului	Efectuează procesarea interogare/reactualizare și transmite clientului răspunsul
Transmite răspunsul înapoi la utilizator	Întreține catalogul de sistem
	Oferă acces simultan la baza de date
	Oferă controlul reconstituirii

## AVANTAJE

- acces mai eficient la BD existente;
- performanțe ridicate:** dacă clienții și serverul se află pe calculatoare diferite, atunci diferite calculatoare pot procesa aplicații în paralel;
- costuri reduse ale dispozitivelor hardware:** numai serverul necesită o capacitate de stocare și o putere de prelucrare suficiente pentru a stoca și gestiona BD;
- costuri reduse de comunicație :** aplicațiile execută o parte din operații la client, care trimite prin rețea numai cererea de acces la BD, ceea ce face ca pe rețea să circule mai puține date;
- creșterea coerenței** - serverul poate trata verificările de integritate, deoarece constrângerile trebuie definite și validate într-un singur loc, fără să fie necesar ca fiecare program aplicație să execute propriile verificări;

## SGBD cu arhitectura client-server

Clasificare SGBD dupa accesul la BD:

- ❑ BD „monolitice”: motorul BD și interfața se află pe același calculator, sunt BD de talie și performanțe reduse.

Ex. Windows: Microsoft Access, Fox Pro, etc.

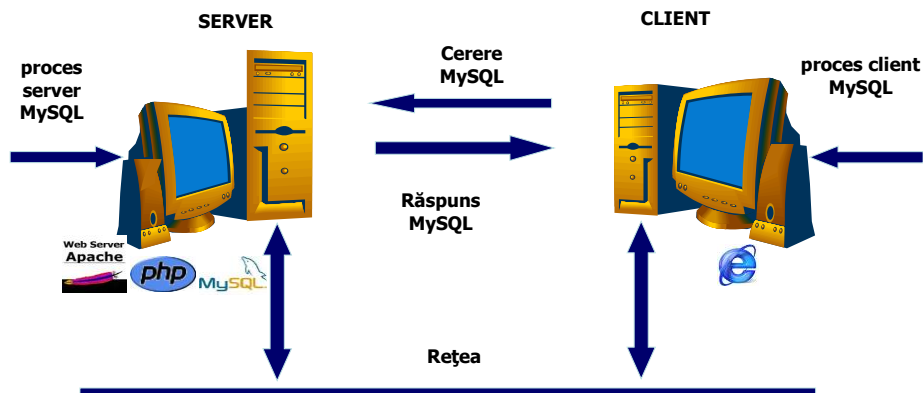

Linux: (în general, Open Source) PostgreSQL, etc.

- ❑ BD „client – server”: motorul BD și interfața se află pe calculatoare diferite, sunt BD de talie și performanțe considerabile.

Ex. MySQL, ORACLE, Microsoft SQL SERVER, IBM DB2, INFORMIX, etc

## ARHITECTURĂ CLIENT - SERVER

## Proiectarea paginilor web dinamice

**Pagini web dinamice:** conținut dinamic , poate diferi la accesări diferite asigura interactivitatea si interactiunea intre clienti si server

Ex: la același URL conținutul paginii poate varia în funcție de anumiți parametri cum ar fi locația geografică a utilizatorului, ora, paginile vizitate anterior, profilul utilizatorului;

**Clasificare pagini web dinamice:**

- pagini dinamice pe parte de client (“Client Side”)
- pagini dinamice pe partea de server(“Server Side”).

## PAGINI WEB DINAMICE “CLIENT SIDE”

**Tehnologii pentru realizarea paginilor dinamice pe partea de client:**

- scripturi pe partea de client** (“client side scripts “): asigurarea interactivitate : meniuri, formulare, crearea de efecte speciale, efectuarea de calcule, animație, etc. Limbaje utilizate: JavaScript, Jscript și VBScript.
- DHTML (“ Dynamic HTML “):** tehnologie dezvoltată de Microsoft care combină HTML, foi de stiluri (CSS) și script-uri pentru realizarea paginilor web dinamice sau interactive.
- applet-uri Java:** aplicații de dimensiune redusă, in limbajul Java (instalare masina virtuala Java).
- controale ActiveX:** componente binare incluse în paginile Web pentru a oferi interactivitate, rulează pe platforma Windows
- elemente multimedia:** realizate in general cu Adobe Flash (instalare plug-in) pentru meniuri, jocuri, animatie

## PAGINI WEB DINAMICE “SERVER SIDE”

Arhitectura server :

- serverul Web,
- interpretorul de scripturi tip server-side,
- driverele de acces la baza de date,
- baza de date și colecțiile de fișiere.

### Arhitectura server Web cu suport de scripting

## PAGINI WEB DINAMICE “SERVER SIDE”

### Server web

**Server web:** aplicație complexă responsabilă pentru comunicarea cu browserele externe.

Informațiile solicitate de la server = fișiere:

- ❑ **Fișiere statice:** se transmit mai departe către browsere fără nici o modificare. Ex: imagini, fișiere HTML, filme, fișiere pentru download, animații Flash etc.
- ❑ **Fișiere script:** programe simple executate de către un interpretor, trimițându-se spre server-ul de Web doar rezultatul execuției lor. Tehnica generării dinamice a documentelor de tip HTML face posibilă accesarea bazelor de date pe Internet.

### Arhitectura server Web cu suport de scripting

## PAGINI WEB DINAMICE “SERVER SIDE”

### Interpretor de scripturi tip server-side

**Interpretor de scripturi tip server-side:** executa scripturi la cererea serverului de Web, preia rezultatul unor interogări la nivelul BD și trimite spre serverul Web rezultatul execuției scripturilor = conținut HTML pentru afisare in browser.

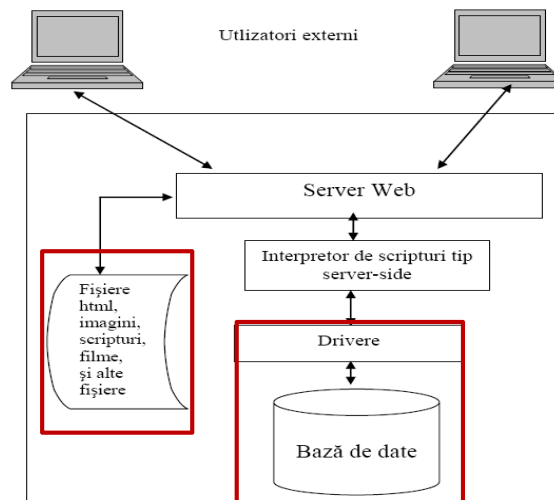

Identificare script: extensia fișierului .

**Limbaje server-side scripting:**

- PHP (Hypertext Preprocessor),
- ASP (Active Server Pages), ASP.NET,
- JSP (Java Server Pages),
- Ruby.

### Arhitectura server Web cu suport de scripting

## PAGINI WEB DINAMICE "SERVER SIDE"

### Driveri. Baza de date

**Driveri de acces la BD:** intermediaza interacțiunea dintre interpretorul de scripturi și BD; sunt instrumente software specializate care nu sunt vizibile nici programatorului nici utilizatorului.

**Baza de date:** constă dintr-un SGBDR instalat fie pe același calculator cu serverul Web, fie este accesibil prin rețea sau Internet.

Ex:

- MySQL, SQL Server, Oracle
- Fox Pro și Access nu se pretează pentru BD web folosite intens.

**Fișiere:** informații cu caracter static trimise utilizatorilor la cerere

## LIMBAJUL PHP

**Limbajul PHP (Hypertext Preprocessor):** cel mai popular limbaj de script pentru generarea de pagini HTML dinamice. Poate fi integrat în HTML.

**Istoric PHP:**

- conceput în 1994 de Rasmus Lerdorf.
- în prezent utilizat de peste 244M domenii (<http://www.php.net/usage.php>)

Site oficial: <http://www.php.net>

## LIMBAJUL PHP

**General:** download, documentatie

- <http://www.php.net/>

**Documentatii:** manual

- <http://www.php.net/manual/en/>
- <http://us2.php.net/manual/en/index.php>

**Tutoriale:**

- PHP.net tutorial: <http://php.net/manual/en/tutorial.php>
- W3schools tutorial:  
<http://www.w3schools.com/php/default.asp>

## LIMBAJUL PHP

**Avantaje:**

- **simplicitate:** simplu de folosit, accesibil ne-programatorilor. Sintaxa asemanatoare limbajului C
- **eficienta:** un programator PHP poate folosi module scrise de un alt programator fara sa fie nevoie sa cunoasca detalii specifice de implementare a codului.
- **cross-platform** : exista implementari ale limbajului pe mai multe sisteme de operare, cele mai populare fiind cele de pe Linux si Windows. Un cod PHP care ruleaza pe Linux, poate fi ulterior folosit pe un server Windows .
- **gratis** : PHP reprezinta un program Open Source, oricine poate folosi acest limbaj gratis. Utilizatorii au acces la sursele PHP (scrise in limbajul C).

## LIMBAJUL PHP

Elemente ale limbajului PHP:

PHP Variables -se definesc cu \$

PHP Echo / Print

PHP Data Types

PHP Strings

PHP Constants

PHP Operators

PHP If...Else...Elseif

PHP Switch

PHP While Loops

PHP For Loops

PHP Functions

PHP Arrays

**Exemplu: variabile**

```
<?php
$txt = "Hello world!";
$x = 5;
$y = 10.5;
?>
```

## LIMBAJUL PHP

Elemente ale limbajului PHP:

PHP Variables

PHP Echo / Print -afisare date: variabile, constante, expresii

PHP Data Types

PHP Strings

PHP Constants

PHP Operators

PHP If...Else...Elseif

PHP Switch

PHP While Loops

PHP For Loops

PHP Functions

PHP Arrays

**Exemplu : afisare variabile**

```
<?php
$txt1 = "Limbajul PHP";
$txt2 = "Variabile";
$x = 5;
$y = 4;
echo "<h2>". $txt1."</h2>";
echo "Tipuri de date PHP:". $txt2 . "<br>";
echo "x=5, y=4, x+y=";
echo $x + $y;
?>
```

### Limbajul PHP

Tipuri de date PHP: Variabile  
x=5, y=4, x+y=9

## LIMBAJUL PHP

Elemente ale limbajului PHP:

PHP Variables

PHP Echo / Print

PHP Data Types -Tipuri de date definite in PHP:

PHP Strings

PHP Constants

PHP Operators

PHP If...Else...Elseif

PHP Switch

PHP While Loops

PHP For Loops

PHP Functions

PHP Arrays

- String
- Integer
- Float (floating point numbers - also called double)
- Boolean
- Array
- Object
- NULL -valoare implicita de initializare a variabilelor
- Resource -apelare baza de date

## LIMBAJUL PHP

Elemente ale limbajului PHP:

PHP Variables

PHP Echo / Print

PHP Data Types

Exemplu : afisare variabile tip sir de caractere concatenate

PHP Strings -siruri

PHP Constants

PHP Operators

PHP If...Else...Elseif

PHP Switch

PHP While Loops

PHP For Loops

PHP Functions

PHP Arrays

```
<?php
$txt1 = "Limbajul PHP";
$txt2 = "Siruri";
echo "<h2>" . $txt1 . "</h2>";
echo "Invata " . $txt1 . " despre " . $txt2 . "<br>";
?>
```

**Limbajul PHP**

Invata Limbajul PHP despre Siruri

## LIMBAJUL PHP

Elemente ale limbajului PHP: **Exemple : functii pentru siruri de caractere**

PHP Variables

PHP Echo / Print

PHP Data Types

PHP Strings

-siruri

PHP Constants

PHP Operators

PHP If...Else...Elseif

PHP Switch

PHP While Loops

PHP For Loops

PHP Functions

PHP Arrays

-functie lungime sir

```
<?php
echo strlen("Hello world!"); // outputs 12
?>
```

-functie nr cuvinte din sir

```
<?php
echo str_word_count("Hello world!"); // outputs 2
?>
```

-functie inversare sir

```
<?php
echo strrev("Hello world!"); // outputs !dlrow olleH
?>
```

Lista completa functii siruri: [PHP String Reference](#).

## LIMBAJUL PHP

Elemente ale limbajului PHP: **Exemple : definire constante**

PHP Variables

PHP Echo / Print

PHP Data Types

PHP Strings

PHP Constants

-constante

PHP Operators

PHP If...Else...Elseif

PHP Switch

PHP While Loops

PHP For Loops

PHP Functions

PHP Arrays

Sintaxa:

```
define(name, value, case-insensitive)
```

unde: *name*: nume constanta

*value*: valoarea constantei

*case-insensitive*: nume constanta este case-insensitive sau nu.

Implicit = false

```
<?php
define("SALUT", "Buna seara", true);
echo salut;
?>
```

```
<?php
define("SALUT", "Buna seara");
echo SALUT;
?>
```

Acelasi efect

Buna seara

### LIMBAJUL PHP

Elemente ale limbajului PHP:

- PHP Variables
- PHP Echo / Print
- PHP Data Types
- PHP Strings
- PHP Constants

- Arithmetic operators
- Assignment operators
- Comparison operators
- Increment/Decrement operators
- Logical operators
- String operators
- Array operators

PHP Operators -operatori

- PHP If...Else...Elseif
- PHP Switch
- PHP While Loops
- PHP For Loops
- PHP Functions
- PHP Arrays

	Name	Example
+	Addition	\$x + \$y
-	Subtraction	\$x - \$y
*	Multiplication	\$x * \$y
/	Division	\$x / \$y
%	Modulus	\$x % \$y
**	Exponentiation	\$x ** \$y

### LIMBAJUL PHP

Elemente ale limbajului PHP:

- PHP Variables
- PHP Echo / Print
- PHP Data Types
- PHP Strings
- PHP Constants

**Exemple : operatori adunare, ridicare la putere**

Operatorul + (adunare)

```
<?php
$x = 10;
$y = 6;
//echo $x + $y;
echo "x=10,y=6, x+y=";
echo $x + $y ;
?>
```

x=10,y=6, x+y=16

PHP Operators -operatori

- PHP If...Else...Elseif
- PHP Switch
- PHP While Loops
- PHP For Loops
- PHP Functions
- PHP Arrays

Operatorul \*\* (ridicare la putere)

```
<?php
$x = 10;
$y = 3;
echo "x=10, y=3, x^3=";
echo $x ** $y;
```

x=10, y=3, x^3=1000

### LIMBAJUL PHP

Elemente ale limbajului PHP:

- PHP Variables
- PHP Echo / Print
- PHP Data Types
- PHP Strings
- PHP Constants

PHP Operators -operatori

- PHP If...Else...Elseif
- PHP Switch
- PHP While Loops
- PHP For Loops
- PHP Functions
- PHP Arrays

- Arithmetic operators
- Assignment operators
- Comparison operators
- Increment/Decrement operators
- Logical operators
- String operators
- Array operators

Assignment	Same as...	Description
$x = y$	$x = y$	The left operand gets set to the value of the expression on the right
$x += y$	$x = x + y$	Addition
$x -= y$	$x = x - y$	Subtraction
$x *= y$	$x = x * y$	Multiplication
$x /= y$	$x = x / y$	Division
$x \% = y$	$x = x \% y$	Modulus

### LIMBAJUL PHP

Elemente ale limbajului PHP:

**Exemple : operatori +=, %=**

Operatorul +=

- PHP Variables
- PHP Echo / Print
- PHP Data Types
- PHP Strings
- PHP Constants

PHP Operators -operatori

- PHP If...Else...Elseif
- PHP Switch
- PHP While Loops
- PHP For Loops
- PHP Functions
- PHP Arrays

```
<?php
$x = 20;
$x += 100;
echo "x=20, x+=100=";
echo $x;
?>
```

x=20, x+=100=120

Operatorul %=

```
<?php
$x = 15;
$x %= 4;
echo "x=15, x%=4<=>x=x%4=";
echo $x;
?>
```

x=15, x%=4<=>x=x%4=3

### LIMBAJUL PHP

Elemente ale limbajului PHP:

PHP Variables

PHP Echo / Print

PHP Data Types

PHP Strings

PHP Constants

PHP Operators -operatori

PHP If...Else...Elseif

PHP Switch

PHP While Loops

PHP For Loops

PHP Functions

PHP Arrays

- Arithmetic operators
- Assignment operators
- Comparison operators

Operator	Name	Example	Result
==	Equal	\$x == \$y	Returns true if \$x is equal to \$y
===	Identical	\$x === \$y	Returns true if \$x is equal to \$y, and they are of the same type
!=	Not equal	\$x != \$y	Returns true if \$x is not equal to \$y
<>	Not equal	\$x <> \$y	Returns true if \$x is not equal to \$y
!==	Not identical	\$x !== \$y	Returns true if \$x is not equal to \$y, or they are not of the same type
>	Greater than	\$x > \$y	Returns true if \$x is greater than \$y
<	Less than	\$x < \$y	Returns true if \$x is less than \$y
>=	Greater than or equal to	\$x >= \$y	Returns true if \$x is greater than or equal to \$y
<=	Less than or equal to	\$x <= \$y	Returns true if \$x is less than or equal to \$y

### LIMBAJUL PHP

Elemente ale limbajului PHP:

PHP Variables

PHP Echo / Print

PHP Data Types

PHP Strings

PHP Constants

PHP Operators -operatori

PHP If...Else...Elseif

PHP Switch

PHP While Loops

PHP For Loops

PHP Functions

PHP Arrays

- Arithmetic operators
- Assignment operators
- Comparison operators
- Increment/Decrement operators
- Logical operators
- String operators
- Array operators

Operator	Name	Description
++\$x	Pre-increment	Increments \$x by one, then returns \$x
\$x++	Post-increment	Returns \$x, then increments \$x by one
--\$x	Pre-decrement	Decrements \$x by one, then returns \$x
\$x--	Post-decrement	Returns \$x, then decrements \$x by one

## LIMBAJUL PHP

Elemente ale limbajului PHP: **Exemplu : operator incrementare**

Operatorul + +

- PHP Variables
- PHP Echo / Print
- PHP Data Types
- PHP Strings
- PHP Constants
- PHP Operators -operatori**
- PHP If...Else...Elseif
- PHP Switch
- PHP While Loops
- PHP For Loops
- PHP Functions
- PHP Arrays

```
<?php
$x = 10;
echo "x++ afiseaza x apoi incrementeaza:". $x++."<br>";
echo "++x incrementeaza x apoi afiseaza:" .++$x;
?>
```

```
x++ afiseaza x apoi incrementeaza:10
++x incrementeaza x apoi afiseaza:12
```

## LIMBAJUL PHP

Elemente ale limbajului PHP:

- PHP Variables
- PHP Echo / Print
- PHP Data Types
- PHP Strings
- PHP Constants
- PHP Operators**
- PHP If...Else...Elseif
- PHP Switch
- PHP While Loops
- PHP For Loops
- PHP Functions
- PHP Arrays

- Arithmetic operators
- Assignment operators
- Comparison operators
- **Increment/Decrement operators**
- Logical operators
- String operators
- Array operators

Operator	Name	Example	Result
and	And	\$x and \$y	True if both \$x and \$y are true
or	Or	\$x or \$y	True if either \$x or \$y is true
xor	Xor	\$x xor \$y	True if either \$x or \$y is true, but not both
&&	And	\$x && \$y	True if both \$x and \$y are true
	Or	\$x    \$y	True if either \$x or \$y is true
!	Not	!\$x	True if \$x is not true

## LIMBAJUL PHP

Elemente ale limbajului PHP:

- PHP Variables
- PHP Echo / Print
- PHP Data Types
- PHP Strings
- PHP Constants
- PHP Operators -operatori**
- PHP If...Else...Elseif
- PHP Switch
- PHP While Loops
- PHP For Loops
- PHP Functions
- PHP Arrays

- Arithmetic operators
- Assignment operators
- Comparison operators
- Increment/Decrement operators
- Logical operators
- String operators**
- Array operators

Operator	Name	Example	Result
.	Concatenation	\$txt1 . \$txt2	Concatenation of \$txt1 and \$txt2
.=	Concatenation assignment	\$txt1 .= \$txt2	Appends \$txt2 to \$txt1

## LIMBAJUL PHP

Elemente ale limbajului PHP:

**Exemple : operatori concatenare**

- PHP Variables
- PHP Echo / Print
- PHP Data Types
- PHP Strings
- PHP Constants
- PHP Operators -operatori**
- PHP If...Else...Elseif
- PHP Switch
- PHP While Loops
- PHP For Loops
- PHP Functions
- PHP Arrays

Operatorul . (concatenare siruri caractere)

```
<?php
$txt1 = "Hello";
$txt2 = " world!";
echo $txt1 . $txt2;
?>
```

Hello world!

Operatorul .= (concatenare siruri caractere)

```
<?php
$txt1 = "Hello";
$txt2 = " world!";
$txt1 .= $txt2;
echo $txt1;
?>
```

## LIMBAJUL PHP

Elemente ale limbajului PHP:

**Exemplu : operator conditional**

PHP Variables

PHP Echo / Print

PHP Data Types

PHP Strings

PHP Constants

**PHP Operators -operatori**

PHP If...Else...Elseif

PHP Switch

PHP While Loops

PHP For Loops

PHP Functions

PHP Arrays

$\$x = expr1 ? expr2 : expr3$   
Returneaza valoarea variabilei x :  
daca expr1 = true , x= expr2  
daca expr2 = false , x= expr3

```
<?php
$x = 5;
$x>1?$x=10:$x=0;
echo "x=$x";
?>
```

x=10

Elemente ale limbajului PHP:

- Arithmetic operators
- Assignment operators
- Comparison operators
- Increment/Decrement operators
- Logical operators
- String operators
- **Array operators**

PHP Variables

PHP Echo / Print

PHP Data Types

PHP Strings

PHP Constants

**PHP Operators**

PHP If...Else...Elseif

PHP Switch

PHP While Loops

PHP For Loops

PHP Functions

PHP Arrays

Operator	Name	Example	Result
+	Union	$\$x + \$y$	Union of $\$x$ and $\$y$
==	Equality	$\$x == \$y$	Returns true if $\$x$ and $\$y$ have the same key/value pairs
===	Identity	$\$x === \$y$	Returns true if $\$x$ and $\$y$ have the same key/value pairs in the same order and of the same types
!=	Inequality	$\$x != \$y$	Returns true if $\$x$ is not equal to $\$y$
<>	Inequality	$\$x <> \$y$	Returns true if $\$x$ is not equal to $\$y$
!==	Non-identity	$\$x !== \$y$	Returns true if $\$x$ is not identical to $\$y$

## LIMBAJUL PHP

Elemente ale limbajului PHP:

PHP Variables

PHP Echo / Print

PHP Data Types

PHP Strings

PHP Constants

PHP Operators

PHP If...Else...Elseif

PHP Switch

PHP While Loops

PHP For Loops

PHP Functions

PHP Arrays

```
if (condition) {  
    code to be executed if condition is true;  
}
```

```
if (condition) {  
    code to be executed if condition is true;  
} else {  
    code to be executed if condition is false;  
}
```

## LIMBAJUL PHP

Elemente ale limbajului PHP:

**Exemple : if**

PHP Variables

PHP Echo / Print

PHP Data Types

PHP Strings

PHP Constants

PHP Operators

PHP If...Else...Elseif

PHP Switch

PHP While Loops

PHP For Loops

PHP Functions

PHP Arrays

```
<?php  
$x = 10;  
$y = 50;  
if ($x < $y)  
{echo "x=10 < y=50";}  
?>
```

x=10 < y=50

```
<?php  
$x = 100;  
$y = 50;  
if ($x <> $y)  
{echo "x=100 diferit de y=50";}  
?>
```

x=100 diferit de y=50

## LIMBAJUL PHP

Elemente ale limbajului PHP:

- PHP Variables
- PHP Echo / Print
- PHP Data Types
- PHP Strings
- PHP Constants
- PHP Operators
- PHP If...Else...Elseif**
- PHP Switch
- PHP While Loops
- PHP For Loops
- PHP Functions
- PHP Arrays

**Exemple : if else**

```
<?php
$a=20;
$b=40;
$x=25;
if (($x >$a) AND ($x < $b ))
{echo "x=25 este in intervalul (20,40)";}
else {echo "x nu este in intervalul (20,40)";}
?>
```

x=25 este in intervalul (20,40)

## LIMBAJUL PHP

Elemente ale limbajului PHP:

- PHP Variables
- PHP Echo / Print
- PHP Data Types
- PHP Strings
- PHP Constants
- PHP Operators
- PHP If...Else...Elseif
- PHP Switch**
- PHP While Loops
- PHP For Loops
- PHP Functions
- PHP Arrays

```
switch (n) {
    case label1:
        code to be executed if n=label1;
        break;
    case label2:
        code to be executed if n=label2;
        break;
    case label3:
        code to be executed if n=label3;
        break;
    ...
    default:
        code to be executed if n is different from all labels;
}
```

## LIMBAJUL PHP

Elemente ale limbajului PHP:

**Exemple : switch**

- PHP Variables
- PHP Echo / Print
- PHP Data Types
- PHP Strings
- PHP Constants
- PHP Operators
- PHP If...Else...Elseif
- PHP Switch**
- PHP While Loops
- PHP For Loops
- PHP Functions
- PHP Arrays

```
<?php
$favcolor = "red";

switch ($favcolor) {
    case "red":
        echo "Your favorite color is red!";
        break;
    case "blue":
        echo "Your favorite color is blue!";
        break;
    case "green":
        echo "Your favorite color is green!";
        break;
    default:
        echo "Your favorite color is neither red, blue, nor green!";
}
?>
```

Your favorite color is red!

## LIMBAJUL PHP

Elemente ale limbajului PHP:

- PHP Variables
- PHP Echo / Print
- PHP Data Types
- PHP Strings
- PHP Constants
- PHP Operators
- PHP If...Else...Elseif
- PHP Switch
- PHP While Loops**
- PHP For Loops
- PHP Functions
- PHP Arrays

```
while (condition is true) {
    code to be executed;
}
```

```
do {
    code to be executed;
} while (condition is true);
```

## LIMBAJUL PHP

Elemente ale limbajului PHP:

Exemple: while, do while

- PHP Variables
- PHP Echo / Print
- PHP Data Types
- PHP Strings
- PHP Constants
- PHP Operators
- PHP If...Else...Elseif
- PHP Switch
- PHP While Loops**
- PHP For Loops
- PHP Functions
- PHP Arrays

```
<?php
$x = 1;

while($x <= 5) {
    echo "The number is: $x <br>";
    $x++;
}
?>
```

```
<?php
$x = 1;

do {
    echo "The number is: $x <br>";
    $x++;
} while ($x <= 5);
?>
```

The number is: 1  
The number is: 2  
The number is: 3  
The number is: 4  
The number is: 5

## LIMBAJUL PHP

Elemente ale limbajului PHP:

- PHP Variables
- PHP Echo / Print
- PHP Data Types
- PHP Strings
- PHP Constants
- PHP Operators
- PHP If...Else...Elseif
- PHP Switch
- PHP While Loops
- PHP For Loops**
- PHP Functions
- PHP Arrays

```
for (init counter; test counter; increment counter) {
    code to be executed;
}
```

```
foreach ($array as $value) {
    code to be executed;
}
```

## LIMBAJUL PHP

Elemente ale limbajului PHP:

Exemple: for, foreach

- PHP Variables
- PHP Echo / Print
- PHP Data Types
- PHP Strings
- PHP Constants
- PHP Operators
- PHP If...Else...Elseif
- PHP Switch
- PHP While Loops
- PHP For Loops**
- PHP Functions
- PHP Arrays

```
<?php
for ($x = 0; $x <= 10; $x++) {
    echo "The number is: $x <br>";
}
?>
```

The number is: 0  
 The number is: 1  
 The number is: 2  
 The number is: 3  
 The number is: 4  
 The number is: 5  
 The number is: 6  
 The number is: 7  
 The number is: 8  
 The number is: 9  
 The number is: 10

```
<?php
$colors = array("red", "green", "blue", "yellow");
foreach ($colors as $value) {
    echo "$value <br>";
}
?>
```

red  
 green  
 blue  
 yellow

## LIMBAJUL PHP

Elemente ale limbajului PHP:

Exemple : functii utilizator

- PHP Variables
- PHP Echo / Print
- PHP Data Types
- PHP Strings
- PHP Constants
- PHP Operators
- PHP If...Else...Elseif
- PHP Switch
- PHP While Loops
- PHP For Loops
- PHP Functions**
- PHP Arrays

```
function functionName() {
    code to be executed;
}
```

```
<?php
function writeMsg() {
    echo "Hello world!";
}

writeMsg(); // call the function
?>
```

Hello world!

-functii utilizator

## LIMBAJUL PHP

Elemente ale limbajului PHP:

- PHP Variables
- PHP Echo / Print
- PHP Data Types
- PHP Strings
- PHP Constants
- PHP Operators
- PHP If...Else...Elseif
- PHP Switch
- PHP While Loops
- PHP For Loops
- PHP Functions

PHP Arrays -enumerari

**Exemple enumerari:**

**-enumerari tip sir indexat:**

Ex. 1:

```
$cars = array("Volvo", "BMW", "Toyota");
```

Echivalent cu :

Ex. 2

```
$cars[0] = "Volvo";
```

```
$cars[1] = "BMW";
```

```
$cars[2] = "Toyota";
```

## LIMBAJUL PHP

Elemente ale limbajului PHP:

**Exemple: enumerari tip sir indexat afisare**

- PHP Variables
- PHP Echo / Print
- PHP Data Types
- PHP Strings
- PHP Constants
- PHP Operators
- PHP If...Else...Elseif
- PHP Switch
- PHP While Loops
- PHP For Loops
- PHP Functions

PHP Arrays -enumerari

```
<?php  
$cars = array("Volvo", "BMW", "Toyota");  
echo $cars[0] . "<br>" . $cars[1] . "<br>" . $cars[2];  
?>
```

```
<?php  
$cars = array("Volvo", "BMW", "Toyota");  
$length = count($cars);  
for($x = 0; $x < $length; $x++) {  
    echo $cars[$x];  
    echo "<br>";  
}  
?>
```

```
<?php  
$cars = array("Volvo", "BMW", "Toyota");  
echo count($cars);  
?>
```

Volvo  
BMW  
Toyota

## LIMBAJUL PHP

Elemente ale limbajului PHP:

PHP Variables

PHP Echo / Print

PHP Data Types

PHP Strings

PHP Constants

PHP Operators

PHP If...Else...Elseif

PHP Switch

PHP While Loops

PHP For Loops

PHP Functions

**Exemple enumerari:**

**-enumerari asociative:**

Ex. 1:

```
$varsta= array("Peter"=>"25", "Ion"=>"27", "Ana"=>"23");
```

Ex. 2:

```
$varsta["Peter"] = "25";
```

```
$varsta["Ion"] = "27";
```

```
$varsta["Ana"] = "23";
```

PHP Arrays -enumerari

## LIMBAJUL PHP

Elemente ale limbajului PHP: **Exemple: enumerari asociative afisare:**

PHP Variables

PHP Echo / Print

PHP Data Types

PHP Strings

PHP Constants

PHP Operators

PHP If...Else...Elseif

PHP Switch

PHP While Loops

PHP For Loops

PHP Functions

```
<?php
$age = array("Peter"=>"25", "Ion"=>"27", "Ana"=>"23");
echo "Peter are " . $age['Peter'] . " ani.";
?>
```

Peter are 25 ani.

```
<?php
$age = array("Peter"=>"25", "Ion"=>"27", "Ana"=>"23");
foreach($age as $x => $x_value) {
    echo "Nume=" . $x . ", Varsta=" . $x_value;
    echo "<br>";
}
?>
```

Nume=Peter, Varsta=25

Nume=Ion, Varsta=27

Nume=Ana, Varsta=23

- PHP Data Types
- PHP Strings
- PHP Constants
- PHP Operators
- PHP If...Else...Elseif
- PHP Switch
- PHP While Loops
- PHP For Loops
- PHP Functions

PHP Arrays -enumerari

**Exemple sortare enumerari asociative : asort**

**Ex.1 sortare dupa Varsta**

\$age= array ("Nume"=>"Varsta")  
asort() – sorteaza tabloul dupa valoarea asociata("Varsta")

```
<?php
$age = array("Peter"=>"25", "Ion"=>"27", "Ana"=>"23");
asort($age);
foreach($age as $x => $x_value) {
    echo "Nume=" . $x . ", Varsta=" . $x_value;
    echo "<br>";
}
?>
```

Nume=Ana, Varsta=23  
Nume=Peter, Varsta=25  
Nume=Ion, Varsta=27

## LIMBAJUL PHP

Elemente ale limbajului PHP:

PHP Variables

PHP Echo / Print

PHP Data Types

PHP Strings

PHP Constants

PHP Operators

PHP If...Else...Elseif

PHP Switch

PHP While Loops

PHP For Loops

PHP Functions

### Exemple sortare enumerari asociative : ksort

Ex.2 sortare dupa Nume:

\$age= array ("Nume"=>"Varsta")

ksort() – sorteaza tabloul dupa cheie (key =" Nume")

```

<?php
$age = array("Peter"=>"25", "Ion"=>"27", "Ana"=>"23");
ksort($age);
foreach($age as $x => $x_value) {
    echo "Nume=" . $x . ", Varsta=" . $x_value;
    echo "<br>";}
?>

```

```

Nume=Ana, Varsta=23
Nume=Ion, Varsta=27
Nume=Peter, Varsta=25

```

PHP Arrays -enumerari

### EXEMPLE PHP: 1. Afisare text simplu, variabile case senzitive

```

<!DOCTYPE html>
<html>
<body>

<h1>My first PHP page</h1>

<?php
echo "Hello World!";
?>

</body>
</html>

```

## My first PHP page

Hello World!

```

<!DOCTYPE html>
<html>
<body>

<?php
$color = "red";
echo "My car is " . $color . "<br>";
echo "My house is " . $COLOR . "<br>";
echo "My boat is " . $coLOR . "<br>";
?>

</body>
</html>

```

```

My car is red
My house is
My boat is

```

Obs: nu se afiseaza valoarea variabilei \$color daca se introduce numele acesteia case insenzitive

### EXEMPLE PHP: 2.Comentarii+ afisare rezultat expresie

```
<!DOCTYPE html>
<html>
<body>

<?php
// This is a single-line comment

# This is also a single-line comment

/*
This is a multiple-lines comment block
that spans over multiple
lines
*/

// You can also use comments to leave out parts of a code line
$x = 5 /* + 15 */ + 5;
echo $x;
?>

</body>
</html>
```

10

### EXEMPLE PHP: 3.Tiparire cu echo sau print

```
<!DOCTYPE html>
<html>
<body>

<?php
echo "<h2>PHP is Fun!</h2>";
echo "Hello world!<br>";
echo "I'm about to learn PHP!<br>";
echo "This ", "string ", "was ", "made
", "with multiple parameters.";
?>

</body>
</html>
```

**PHP is Fun!**

Hello world!  
I'm about to learn PHP!  
This string was made with multiple parameters.

```
<!DOCTYPE html>
<html>
<body>

<?php
print "<h2>PHP is Fun!</h2>";
print "Hello world!<br>";
print "I'm about to learn PHP!";
?>

</body>
</html>
```

**PHP is Fun!**

Hello world!  
I'm about to learn PHP!

### EXEMPLE PHP: 4.Siruri /enumerari indexate

```
<!DOCTYPE html>
<html>
<body>

<?php
echo str_word_count("Hello world!");
?>

</body>
</html>
```

2

```
<!DOCTYPE html>
<html>
<body>

<?php
$cars = array("Volvo", "BMW", "Toyota");
$arrlength = count($cars);

for($x = 0; $x < $arrlength; $x++) {
    echo $cars[$x];
    echo "<br>";
}
?>

</body>
</html>
```

Volvo  
BMW  
Toyota

### EXEMPLE PHP: 5.Siruri asociative

```
<!DOCTYPE html>
<html>
<body>

<?php
$sage = array("Peter"=>"35", "Ben"=>"37", "Joe"=>"43");
echo "Peter is " . $sage['Peter'] . " years old.";
?>

</body>
</html>
```

Peter is 35 years old.

## EXEMPLE PHP: 6.Data calendaristica sistem

The screenshot shows a Notepad window with the following PHP code:

```
<!DOCTYPE html>
<html>
<body>

<?php
date_default_timezone_set("Europe/Bucharest");
echo "Today is " . date("Y/m/d") . "<br>";
echo "Today is " . date("Y.m.d") . "<br>";
echo "Today is " . date("Y-m-d") . "<br>";
echo "Today is " . date("l");
?>

</body>
</html>
<!DOCTYPE html>
<html>
<body>
```

The browser window shows the output of the code:

```
Today is 2019/11/13
Today is 2019.11.13
Today is 2019-11-13
Today is Wednesday
```

Test: <http://et.utcluj.ro/PHP/date.php>

## LIMBAJUL PHP: Functii matematice predefinite

<code>log_value()</code>	<code>sqrt()</code>	Returns the square root of a number
<code>log()</code>	<code>srand()</code>	Seeds the random number generator
<code>log10()</code>	<code>tan()</code>	Returns the tangent of a number
<code>log1p()</code>	<code>tanh()</code>	Returns the hyperbolic tangent of a number
<code>max()</code>		Returns the highest value in an array, or the highest value of several specified values
<code>min()</code>		Returns the lowest value in an array, or the lowest value of several specified values
<code>mt_getrandmax()</code>		Returns the largest possible value returned by <code>mt_rand()</code>
<code>mt_rand()</code>		Generates a random integer using Mersenne Twister algorithm
<code>mt_srand()</code>		Seeds the Mersenne Twister random number generator
<code>octdec()</code>		Converts an octal number to a decimal number
<code>pi()</code>		Returns the value of PI
<code>pow()</code>		Returns x raised to the power of y
<code>rad2deg()</code>		Converts a radian value to a degree value
<code>rand()</code>		Generates a random integer
<code>round()</code>		Rounds a floating-point number

## LIMBAJUL PHP: Constante matematice predefinite

### PHP 5 Predefined Math Constants

Constant	Value	Description	PHP Version
INF	INF	The infinite	PHP 4
M_E	2.7182818284590452354	Returns e	PHP 4
M_EULER	0.57721566490153286061	Returns Euler constant	PHP 4
M_LNPI	1.14472988584940017414	Returns the natural logarithm of PI: $\log_e(\pi)$	PHP 5.2
M_LN2	0.69314718055994530942	Returns the natural logarithm of 2: $\log_e 2$	PHP 4
M_LN10	2.30258509299404566402	Returns the natural logarithm of 10: $\log_e 10$	PHP 4
M_LOG2E	1.4426950408889634074	Returns the base-2 logarithm of E: $\log_2 e$	PHP 4
M_LOG10E	0.43429448190325182765	Returns the base-10 logarithm of E: $\log_{10} e$	PHP 4
M_PI	3.14159265358979323846	Returns Pi	PHP 4
M_PI_2	1.57079632679489661923	Returns $\pi/2$	PHP 4
M_PI_4	0.78539816339744830962	Returns $\pi/4$	PHP 4
M_1_PI	0.31830988618379067154	Returns $1/\pi$	PHP 4
M_2_PI	0.63661977236758134308	Returns $2/\pi$	PHP 4
M_SQRTPI	1.77245385090551602729	Returns the square root of PI: $\sqrt{\pi}$	PHP 5.2
M_2_SQRTPI	1.12837916709551257390	Returns 2/square root of PI: $2/\sqrt{\pi}$	PHP 4
M_SQRT1_2	0.70710678118654752440	Returns the square root of 1/2: $1/\sqrt{2}$	PHP 4
M_SQRT2	1.41421356237309504880	Returns the square root of 2: $\sqrt{2}$	PHP 4

## Operatii si expresii matematice in PHP

Calcul  $\cos(\pi/2)$

```
<!DOCTYPE html>
<html>
<body>
<?php
echo cos(M_PI_2);
?>
</body>
</html>
```

www.et.utcluj.ro/PHP/cosinus.php  
6.1232339957368E-17

Test: <http://et.utcluj.ro/PHP/cosinus.php>

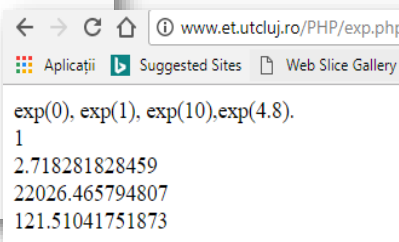

## Operatii si expresii matematice in PHP

### Afisare functia exponential

```
exp - Notepad
File Edit Format View Help
<!DOCTYPE html>
<html>
<body>
<?php
echo "exp(0), exp(1), exp(10),exp(4.8).<br>";
echo(exp(0) . "<br>");
echo(exp(1) . "<br>");
echo(exp(10) . "<br>");
echo(exp(4.8));
?>
</body>
</html>
```

Test: <http://et.utcluj.ro/PHP/exp.php>

## LIMBAJUL PHP

Variabile globale – superglobals introduse din versiunea PHP 4.1.0

- \$GLOBALS
- \$\_SERVER
- \$\_REQUEST
- **\$\_POST**
- **\$\_GET** -utilizate pentru formulare on line in HTML5
- \$\_FILES
- \$\_ENV
- \$\_COOKIE
- \$\_SESSION

## FORMULARE ON LINE – METODA HTTP POST

Exemplu: Formular cu nume si email METODA POST

The screenshot shows a web browser window with the address bar displaying `et.utcluj.ro/PHP/form.php`. The browser's address bar also shows navigation icons (back, forward, refresh, home) and search engines (New Snip, Ctrl+N). Below the address bar, there are several icons for applications and the text "Universitatea Tehni...". The main content area of the browser displays a form with two text input fields: "Name: Laura Grindei" and "E-mail: laura.grindei@ethm.utcluj.ro". Below these fields is a button labeled "Trimita".

Test: <http://et.utcluj.ro/PHP/form.php>

## FORMULARE ON LINE – METODA HTTP POST

The image shows two overlapping windows. The background window is a Notepad application titled "form - Notepad". It contains the following HTML code:

```
<!DOCTYPE HTML>
<html>
<body>
<form action="welcome1.php" method="post">
Name: <input type="text" name="name"><br>
E-mail: <input type="text" name="email"><br>
<input type="submit">
</form>
</body>
</html>
```

The foreground window is a web browser showing the same form as in the previous image, with the address bar displaying `et.utcluj.ro/PHP/form.php`. The form fields are filled with "Laura Grindei" and "laura.grindei@ethm.utcluj.ro", and the "Trimita" button is visible.

Rezultat: datele completate sunt trimise prin metoda HTTP POST in fisierul `welcome1.php` si browserul client afiseaza:

## FORMULARE ON LINE – METODA HTTP POST

Fisierul *welcome1.php* contine:

```
welcome1 - Notepad
File Edit Format View Help
<html>
<body>
Welcome <?php echo $_POST["name"]; ?><br>
Emailul tau este: <?php echo $_POST["email"];?>
<?php
echo " Bun venit pe site-ul nostru!";
?>
</body>
</html>
```

## FORMULARE ON LINE – METODA HTTP POST

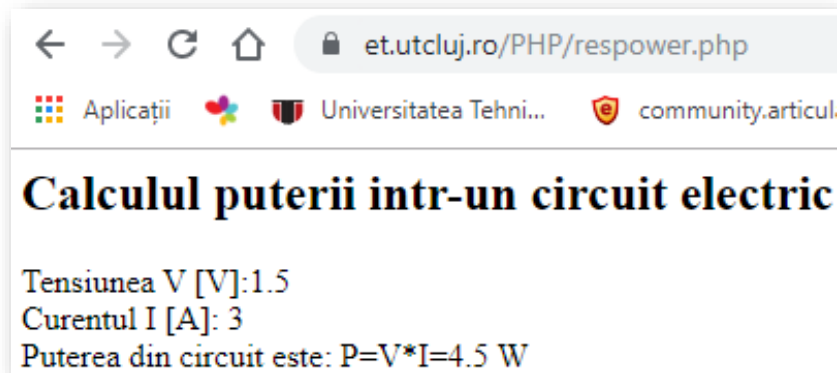

```
power - Notepad
File Edit Format View Help
<!DOCTYPE HTML>
<html>
<body>
<form action="respower.php" method="post">
Tensiune: <input type="number step="any" name="tensiune"><br>
Curent: <input type="number step="any" name="curent"><br>
<input type="submit">
</form>
</body>
</html>
```

Rezultat: datele completate sunt trimise prin metoda HTTP POST in fisierul *respower.php* si browserul client afiseaza:

## FORMULARE ON LINE – METODA HTTP POST

Exemplu: Formular interfata calcul putere METODA POST

## FORMULARE ON LINE – METODA HTTP POST

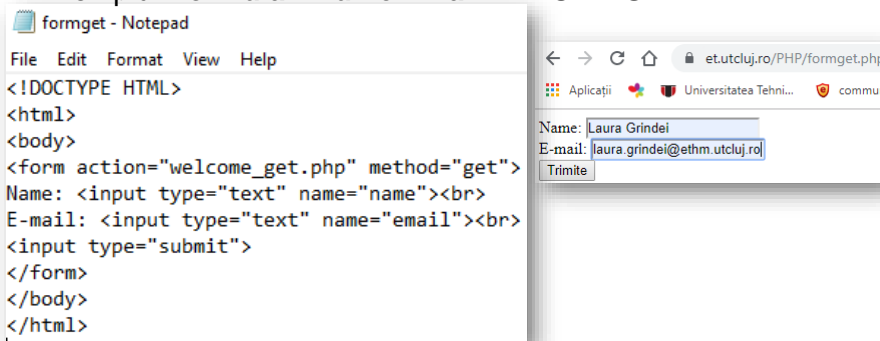

Fisierul sursa este *respower.php*:

```
respower - Notepad
File Edit Format View Help
<html>
<body>
<h2> Calculul puterii intr-un circuit electric</h2>
Tensiunea V [V]:<?php echo $_POST["tensiune"]; ?><br>
Curentul I [A]: <?php echo $_POST["curent"];?>
<br>
<?php
echo " Puterea din circuit este: P=V*I=";
echo floatval($_POST["tensiune"]* $_POST["curent"]);
echo " W";
?>
</body>
</html>
```

## FORMULAR ON LINE – METODA HTTP GET

### Exemplu: Formular Nume Email METODA GET

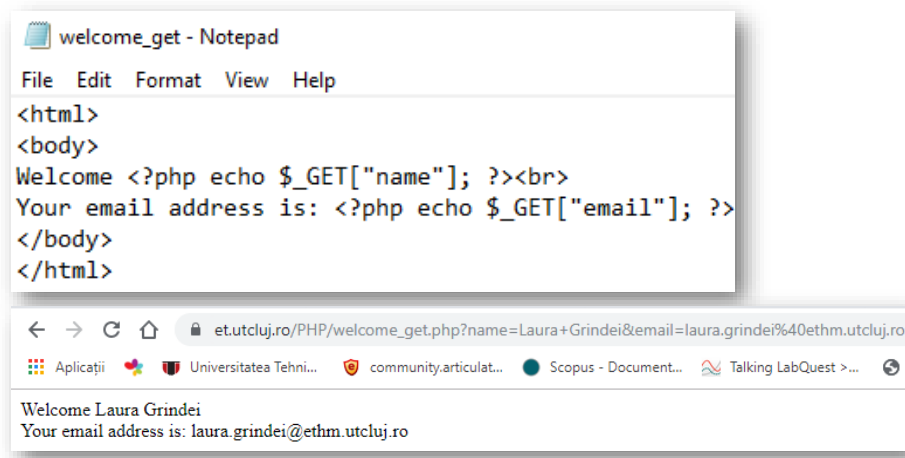

Rezultat: datele completate sunt trimise prin metoda HTTP GET in fisierul "*welcome\_get.php*" si browserul client afiseaza:

## FORMULAR ON LINE – METODA HTTP GET

Fisierul "*welcome\_get.php*" contine:

## FORMULARE ON LINE – ALEGEREA METODEI

Metoda HTTP GET se alege cand :

informațiile trimise dintr-un formular cu metoda GET sunt publice .

informația trimisă prin formular : maxim 2000 caractere

Observație: GET nu trebuie utilizat niciodată pentru trimiterea de parole sau alte informații sensibile!

Metoda HTTP POST este metoda mai des utilizată și se alege cand :

informațiile trimise cu metoda POST sunt invizibile pentru alții

informația depășește 2000 de caractere (nelimitat)

Observație: POST e recomandată pentru trimiterea de parole sau alte informații sensibile

## Includere fișiere în PHP : Include

Ex. 1 Include footer.php

footer.php

footer - Notepad

File Edit Format View Help

```
<!DOCTYPE html>
<html>
<body>
<?php
echo "<p>Copyright &copy; 2010-2019 utcn.ro</p>";
?>
</body>
</html>
```

inclfooter.php

File Edit Format View Help

```
<html>
<body>
<h1>Welcome to my home page!</h1>
<p>Aceasta pagina web include un footer</p>
<?php include 'footer.php';?>
</body>
</html>
```

et.utcluj.ro/PHP/inclfooter.php  
Aplicații Universitatea Tehni... community.art  
**Welcome to my home page!**  
Aceasta pagina web include un footer  
Copyright © 2010-2019 utcn.ro

## Includere fisiere in PHP : Include

### Ex. 2 Include menu.php

menu.php

```
<?php
echo '<a href="/default.asp">Home</a> -
<a href="/html/default.asp">HTML Tutorial</a> -
<a href="/css/default.asp">CSS Tutorial</a> -
<a href="/js/default.asp">JavaScript Tutorial</a> -
<a href="default.asp">PHP Tutorial</a>';
?>
```

index.php

```
<!DOCTYPE html>
<html>
<body>

<div class="menu">
<?php include 'menu.php';?>
</div>

<h1>Welcome to my home page!</h1>
<p>Some text.</p>
<p>Some more text.</p>

</body>
</html>
```

[Home](#) - [HTML Tutorial](#) - [CSS Tutorial](#) - [JavaScript Tutorial](#) - [PHP Tutorial](#)

## Welcome to my home page!

Some text.

Some more text.

## Includere fisiere in PHP : Include

### Ex. 3 Include menu.php, header.php

The screenshot shows the website for PARTING - Partenariat interuniversitar pentru excelență în inginerie. The page features a header with logos of the European Union, the Government of Romania, the Ministry of National Education, and the University of Medicine and Pharmacy of Cluj-Napoca. Below the header, there is a navigation menu with links for Home, Descriere, Obiective, Activitati, Echipa, Buget, Rezultate, Documente, Conferinta lansare proiect, Contenta incheiere proiect, Instruire platforma proiect, Sustinabilitate proiect, Anunturi, Contact, and Acces Platforma. The main content area is divided into two columns: 'Proiect Parting - Home' and 'Anunturi'. The 'Proiect Parting - Home' section includes information about the project's funding, objectives, and contact details. The 'Anunturi' section lists various events and announcements, such as the submission of theses, conferences, and seminars.

## Includere fisiere in PHP : Include

menu.php

Ex. 3 Include menu.php

```
<table width="188" border="0" cellpadding="0" cellspacing="0">
<tbody>
<tr>
<td align="right" valign="left" bgcolor="#FFFFFF">&nbsp;  </td>
</tr>
<tr>
<td height="21" align="right" valign="left" nowrap="nowrap" bgcolor="#E8E8E8"><font face=
"Arial, Helvetica, sans-serif"><strong> <a href="index.php">Home</a> </strong></font></td>
</tr>
<tr>
<td height="21" align="right" valign="left" nowrap="nowrap" bgcolor="#E8E8E8">&nbsp;  </td>
</tr>
<tr>
<td height="21" align="right" valign="left" nowrap="nowrap" bgcolor="#E8E8E8"><strong><font
face="Arial, Helvetica, sans-serif"><a href="descriere.php">Descriere</a></font> </strong></td>
</tr>
<tr>
<td height="21" align="right" valign="left" nowrap="nowrap" bgcolor="#E8E8E8"><strong><font
face="Arial, Helvetica, sans-serif"><a href="obiective.php">Obiective</a></font></strong></td>
</tr>
<tr>
<td height="21" align="right" valign="left" nowrap="nowrap" bgcolor="#E8E8E8"><strong><font
face="Arial, Helvetica, sans-serif"><a href="activitati.php">Activitati</a></font></strong></td>
</tr>
<tr>
<td height="21" align="right" valign="left" nowrap="nowrap" bgcolor="#E8E8E8"><strong><font
face="Arial, Helvetica, sans-serif"><a href="echipa.php">Echipa</a></font></strong></td>
</tr>
</tbody>
</table>
```

## Includere fisiere in PHP : Include

index.php

Ex. 3 Include header.php , menu.php

```
<?php include('header.php'); ?>
<TABLE width="99%" border=0 cellPadding=0 cellSpacing=0>
<TBODY>
<TR>
<TD align="center" valign="top" bgcolor="#FFFFFF"> <table width="100%" border="0">
<tr>
<td height="130" align="center"></td>
</tr>
</table>
<div align="center"><font size="2">A</font><font size="2">cest site este
cofinatat din Fondul Social European prin Programul Operational Sectorial
de Dezvoltarea Resurselor Umane 2007-2013. </font><font size="1">Pentru
informatii detaliate despre celelalte programe <br />
cofinantate de Uniunea
Europeana , va invitam sa vizitati <a href="http://www.fonduri-ue.ro"><strong><u>
www.fonduri-ue.ro</u></strong></a></font></div></TD>
<td width=209 valign=top>
<?php include('menu.php'); ?>
<p align="left"><br>
</p></td>
```

## Includere fisiere in PHP : Fisiere- open , read , close

### Ex. 4 afiseaza text din fisier

webdictionary.txt

```
AJAX = Asynchronous JavaScript and XML
CSS = Cascading Style Sheets
HTML = Hyper Text Markup Language
PHP = PHP Hypertext Preprocessor
SQL = Structured Query Language
SVG = Scalable Vector Graphics
XML = EXtensible Markup Language
```

file.php

```
<!DOCTYPE html>
<html>
<body>

<?php
$myfile = fopen("webdictionary.txt", "r")
or die("Unable to open file!");
echo
fread($myfile,filesize("webdictionary.txt
"));
fclose($myfile);
?>

</body>
</html>
```

AJAX = Asynchronous JavaScript and XML  
CSS = Cascading Style Sheets  
HTML = Hyper Text Markup Language  
PHP = PHP Hypertext Preprocessor  
SQL = Structured Query Language  
SVG = Scalable Vector Graphics  
XML = EXtensible Markup Language

## Includere fisiere in PHP : Fisiere- open , read , close

### Ex. 5 afiseaza o singura linie text din fisier cu fgets

webdictionary.txt

```
AJAX = Asynchronous JavaScript and XML
CSS = Cascading Style Sheets
HTML = Hyper Text Markup Language
PHP = PHP Hypertext Preprocessor
SQL = Structured Query Language
SVG = Scalable Vector Graphics
XML = EXtensible Markup Language
```

read.php

```
<!DOCTYPE html>
<html>
<body>

<?php
$myfile = fopen("webdictionary.txt", "r")
or die("Unable to open file!");
echo fgets($myfile);
fclose($myfile);
?>

</body>
</html>
```

AJAX = Asynchronous JavaScript and XML

## Includere fisiere in PHP : Fisiere- open , read, close

Ex.6 afiseaza continutul unui fisier cu feof() si fgets()

webdictionary.txt

```
AJAX = Asynchronous JavaScript and XML
CSS = Cascading Style Sheets
HTML = Hyper Text Markup Language
PHP = PHP Hypertext Preprocessor
SQL = Structured Query Language
SVG = Scalable Vector Graphics
XML = EXtensible Markup Language
```

afis.php

```
<!DOCTYPE html>
<html>
<body>

<?php
$myfile = fopen("webdictionary.txt", "r")
or die("Unable to open file!");
// Output one line until end-of-file
while(!feof($myfile)) {
    echo fgets($myfile) . "<br>";
}
fclose($myfile);
?>

</body>
</html>
```

```
AJAX = Asynchronous JavaScript and XML
CSS = Cascading Style Sheets
HTML = Hyper Text Markup Language
PHP = PHP Hypertext Preprocessor
SQL = Structured Query Language
SVG = Scalable Vector Graphics
XML = EXtensible Markup Language
```

## Includere fisiere in PHP : Fisiere- open , read, close

Ex. 7 afiseaza continutul unui fisier caracter cu caracter feof(),fgets()

webdictionary.txt

```
AJAX = Asynchronous JavaScript and XML
CSS = Cascading Style Sheets
HTML = Hyper Text Markup Language
PHP = PHP Hypertext Preprocessor
SQL = Structured Query Language
SVG = Scalable Vector Graphics
XML = EXtensible Markup Language
```

afiseaza.php

```
<!DOCTYPE html>
<html>
<body>

<?php
$myfile = fopen("webdictionary.txt", "r")
or die("Unable to open file!");
// Output one character until end-of-file
while(!feof($myfile)) {
    echo fgetc($myfile);
}
fclose($myfile);
?>

</body>
</html>
```

```
AJAX = Asynchronous JavaScript and
XML CSS = Cascading Style Sheets
HTML = Hyper Text Markup Language
PHP = PHP Hypertext Preprocessor SQL =
Structured Query Language SVG =
Scalable Vector Graphics XML =
EXtensible Markup Language
```

## Includere fisiere in PHP : Fisiere- open , write, close

Ex. 8 scrie intr-un fisier variabila sir \$txt: fwrite()

index.php

```
<?php
$myfile = fopen("newfile.txt", "w") or die("Unable to open file!");
$txt = "John Doe\n";
fwrite($myfile, $txt);
$txt = "Jane Doe\n";
fwrite($myfile, $txt);
fclose($myfile);
?>
```

newfile.txt

```
John Doe
Jane Doe
```

## Includere fisiere in PHP : Fisiere- open , read, close

Moduri de deschidere fisiere

Modes	Description
r	<b>Open a file for read only.</b> File pointer starts at the beginning of the file
w	<b>Open a file for write only.</b> Erases the contents of the file or creates a new file if it doesn't exist. File pointer starts at the beginning of the file
a	<b>Open a file for write only.</b> The existing data in file is preserved. File pointer starts at the end of the file. Creates a new file if the file doesn't exist
x	<b>Creates a new file for write only.</b> Returns FALSE and an error if file already exists
r+	<b>Open a file for read/write.</b> File pointer starts at the beginning of the file
w+	<b>Open a file for read/write.</b> Erases the contents of the file or creates a new file if it doesn't exist. File pointer starts at the beginning of the file
a+	<b>Open a file for read/write.</b> The existing data in file is preserved. File pointer starts at the end of the file. Creates a new file if the file doesn't exist
x+	<b>Creates a new file for read/write.</b> Returns FALSE and an error if file already exists

## SGBD MySQL

**MySQL** : SGBD foarte rapid si robust permite accesul multi-user si multi-thread (mai multe fire de executie). Utilizeaza limbajul SQL.

### Istoric MySQL:

- apare in 1979
- disponibil public din 1996

Adresa web MySQL: <http://www.mysql.com>

### Caracteristici generale:

- gratuit
- Open Source, dar si cu licente comerciale.

## PHP si MySQL

PHP 5 (si versiunile ulterioare) se conecteaza cu baze de date MySQL prin:

- ❑ **extensia MySQLi** ("i" de la improved): permite conectarea doar cu BD MySQL in 2 moduri:

- Object Oriented si
- Procedural

<http://php.net/manual/en/mysqli.installation.php>

- ❑ **PDO (PHP Data Objects)**: permite conectarea cu 12 tipuri diferite de BD

<http://php.net/manual/en/pdo.installation.php>

## Deschidere conexiune la BD MySQL cu MySQLi Object-Oriented

```
<?php
$servername = "localhost";
$username = "username";
$password = "password";

// Create connection
$conn = new mysqli($servername, $username, $password);

// Check connection
if ($conn->connect_error) {
    die("Connection failed: " . $conn->connect_error);
}
echo "Connected successfully";
?>
```

### Inchidere conexiune

```
$conn->close();
```

## Deschidere conexiune la BD MySQL cu MySQLi Procedural

```
<?php
$servername = "localhost";
$username = "username";
$password = "password";

// Create connection
$conn = mysqli_connect($servername, $username, $password);

// Check connection
if (!$conn) {
    die("Connection failed: " . mysqli_connect_error());
}
echo "Connected successfully";
?>
```

### Inchidere conexiune

```
mysqli_close($conn);
```

## Deschidere conexiune PHP la BD MySQL cu PDO

```
<?php
$servername = "localhost";
$username = "username";
$password = "password";

try {
    $conn = new PDO("mysql:host=$servername;dbname=myDB", $username, $password);
    // set the PDO error mode to exception
    $conn->setAttribute(PDO::ATTR_ERRMODE, PDO::ERRMODE_EXCEPTION);
    echo "Connected successfully";
}
catch(PDOException $e)
{
    echo "Connection failed: " . $e->getMessage();
}
?>
```

### Inchidere conexiune

```
$conn = null;
```

## Creare BD utilizand PHP si MySQLi Object-oriented

```
<?php
$servername = "localhost";
$username = "username";
$password = "password";

// Create connection
$conn = new mysqli($servername, $username, $password);
// Check connection
if ($conn->connect_error) {
    die("Connection failed: " . $conn->connect_error);
}

// Create database
$sql = "CREATE DATABASE myDB";
if ($conn->query($sql) === TRUE) {
    echo "Database created successfully";
} else {
    echo "Error creating database: " . $conn->error;
}

$conn->close();
?>
```

## Exemplu creare tabel in BD utilizand PHP si MySQLi Object-orient

Se creeaza un tabel "MyGuests",  
cu 5 coloane:

1. "id",
2. "firstname",
3. "lastname",
4. "email" si
5. "reg\_date":

```
<?php
$servername = "localhost";
$username = "username";
$password = "password";
$dbname = "myDB";

// Create connection
$conn = new mysqli($servername, $username, $password, $dbname);
// Check connection
if ($conn->connect_error) {
    die("Connection failed: " . $conn->connect_error);
}

// sql to create table
$sql = "CREATE TABLE MyGuests (
id INT(6) UNSIGNED AUTO_INCREMENT PRIMARY KEY,
firstname VARCHAR(30) NOT NULL,
lastname VARCHAR(30) NOT NULL,
email VARCHAR(50),
reg_date TIMESTAMP
)";

if ($conn->query($sql) === TRUE) {
    echo "Table MyGuests created successfully";
} else {
    echo "Error creating table: " . $conn->error;
}
}
```

## Exemplu inserare date in BD utilizand PHP si MySQLi Object-oriented

```
// Create connection
$conn = new mysqli($servername, $username, $password, $dbname);
// Check connection
if ($conn->connect_error) {
    die("Connection failed: " . $conn->connect_error);
}

$sql = "INSERT INTO MyGuests (firstname, lastname, email)
VALUES ('John', 'Doe', 'john@example.com')";

if ($conn->query($sql) === TRUE) {
    echo "New record created successfully";
} else {
    echo "Error: " . $sql . "<br>" . $conn->error;
}
}
```

## Exemplu inserare multipla date in BD utilizand PHP si MySQLi Object-oriented

```
$sql = "INSERT INTO MyGuests (firstname, lastname, email)
VALUES ('John', 'Doe', 'john@example.com');";
$sql .= "INSERT INTO MyGuests (firstname, lastname, email)
VALUES ('Mary', 'Moe', 'mary@example.com');";
$sql .= "INSERT INTO MyGuests (firstname, lastname, email)
VALUES ('Julie', 'Dooley', 'julie@example.com');";
```

```
if ($conn->multi_query($sql) === TRUE) {
    echo "New records created successfully";
} else {
    echo "Error: " . $sql . "<br>" . $conn->error;
}
```

## Exemplu interogare date in BD cu SELECT utilizand PHP si MySQLi Object-oriented

```
<?php
$servername = "localhost";
$username = "username";
$password = "password";
$dbname = "myDB";

// Create connection
$conn = new mysqli($servername, $username, $password, $dbname);
// Check connection
if ($conn->connect_error) {
    die("Connection failed: " . $conn->connect_error);
}

$sql = "SELECT id, firstname, lastname FROM MyGuests";
$result = $conn->query($sql);

if ($result->num_rows > 0) {
    // output data of each row
    while($row = $result->fetch_assoc()) {
        echo "id: " . $row["id"]. " - Name: " . $row["firstname"]. " " . $row["lastname"]. "
    <br>";
    }
} else {
    echo "0 results";
}
$conn->close();
?>
```

Rezultate afisate

id: 1 - Name: John Doe  
id: 2 - Name: Mary Moe  
id: 3 - Name: Julie Dooley

### Exemplu stergere date din BD cu DELETE utilizand PHP si MySQLi Object-oriented

Fie tabelul "MyGuests": se sterge al 3-lea articol/linie

id	firstname	lastname	email	reg_date
1	John	Doe	john@example.com	2014-10-22 14:26:15
2	Mary	Moe	mary@example.com	2014-10-23 10:22:30
3	Julie	Dooley	julie@example.com	2014-10-26 10:48:23

```
// Create connection
$conn = new mysqli($servername, $username, $password, $dbname);
// Check connection
if ($conn->connect_error) {
    die("Connection failed: " . $conn->connect_error);
}
```

```
// sql to delete a record
$sql = "DELETE FROM MyGuests WHERE id=3";

if ($conn->query($sql) === TRUE) {
    echo "Record deleted successfully";
} else {
    echo "Error deleting record: " . $conn->error;
}
```

### Exemplu modificare date din BD cu UPDATE utilizand PHP si MySQLi Object-oriented

Fie tabel "MyGuests": se modifica campul lastname pentru articolul 2 in Doe

id	firstname	lastname	email	reg_date
1	John	Doe	john@example.com	2014-10-22 14:26:15
2	Mary	Moe	mary@example.com	2014-10-23 10:22:30

```
$sql = "UPDATE MyGuests SET lastname='Doe' WHERE id=2";

if ($conn->query($sql) === TRUE) {
    echo "Record updated successfully";
} else {
    echo "Error updating record: " . $conn->error;
}
```

Rezultat

id	firstname	lastname	email	reg_date
1	John	Doe	john@example.com	2014-10-22 14:26:15
2	Mary	Doe	mary@example.com	2014-10-23 10:22:30

## Validare cod PHP on line

- [PHP Sandbox, test PHP online, PHP tester](#)
- [Write Code Online - PHP | start write and run php code online](#)
- [eval.in](#)
- [Execute PHP Script Online](#)
- [Nitrous.IO](#)

## Validare cod PHP on line Sandbox

Your script:

```
1 <?php
2 //Enter your code here, enjoy!
3
4 $array = array("1" => "PHP code tester Sandbox Online",
5               "foo" => "bar", 5, 5 => 89009,
6               "case" => "Random Stuff: " . rand(100,999),
7               "PHP Version" => phpversion()
8               );
9
10 foreach( $array as $key => $value ){
11     echo $key."\t=>\t".$value."\n";
12 }
13
14
```

Run on PHP version:

Output:

Execute code

Save or share your code

Result:

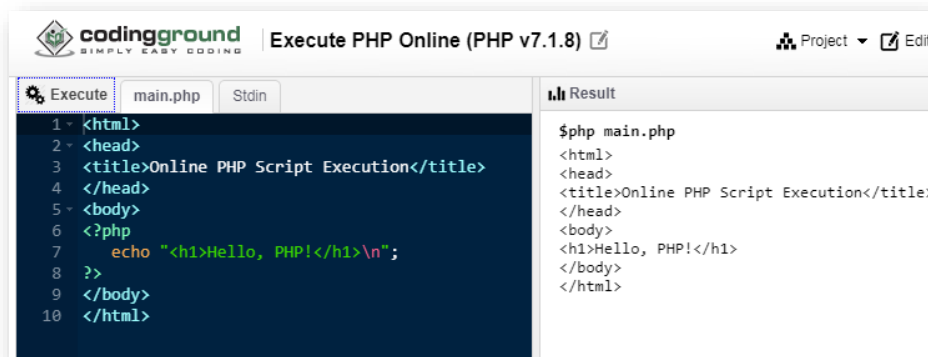

```
1 => PHP code tester Sandbox Online
foo => bar
2 => 5
5 => 89009
case => Random Stuff: 644
PHP Version => 7.0.3
```

## Aplicatii complexe PHP

1. E-Commerce
2. Graphical User Interface: desktop GUI applications utilizand PHP extensions:
  - [PHP GTK](#) - This extension is a popular open source that implements the GIMP toolkit
  - [ZZEE PHP GUI](#) - A paid solution that allows you to turn your PHP scripts into Windows applications
3. Forum de discutii
  - [php BB](#)
  - [vBulletin](#)
  - [Pun BB](#)
4. Aplicatii Facebook
  - [Facebook developer's wiki](#)
5. Liste de email : Mailing Lists
6. PHP Photo Gallery
- 7.CMS:
  - [Drupal](#)
  - [Wordpress](#), [Joomla](#)
8. Grafice web: PHPChart

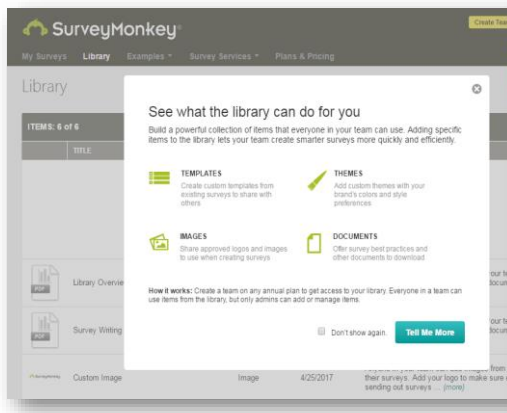

## Formulare si chestionare on line: Survey Monkey

Creare formular:

- usor, exista o serie de template-uri
- se pot crea intrebari cu logica
- nu se genereaza codul sursa doar

And here's our full list of sample survey questionnaires:

- 360 degree Feedback
- Airline Passenger Feedback
- Before They Were Famous Survey
- Brand Awareness Survey
- Bullying Survey
- Business to Business Survey
- Business Travel Form
- CAHPS Dental Plan Survey
- CAHPS Health Plan Survey 4.0
- CAHPS Survey Template
- CAHPS Visit Survey
- Child Behaviors Survey
- Commuting Survey
- Customer Comments Feedback
- Customer Satisfaction Survey
- Customer Service Feedback
- Customer Service Survey
- Department Performance Poll
- Diet & Exercise Survey
- Do You Have Health Insurance?
- Donor Feedback
- Education Demographics Survey
- Employee Benefits Survey
- Employee Exit Survey
- Employee Performance Review Template
- Employment Feedback
- Endurance Event Feedback
- Entertainment Event Feedback
- Environmental Issues Poll
- Event Planning Questionnaire
- Facebook Profile Questionnaire
- Facebook Survey Template
- Favorite Celebrities Poll
- Firmographics Survey
- Fundraising Feedback
- General Event Feedback
- General Internet Usage
- HCAHPS Survey Template
- Health Insurance Evaluation
- Healthcare Expenses Feedback
- Height & Weight Survey
- High School Sports - Student Feedback
- Hospital Performance Evaluation
- Hotel Feedback
- Makeup Products Feedback
- Management Performance

- Market Research—Service Feedback
- Market Research Template
- Mobile Apps Survey
- Movie and TV Viewing Habit Surveys
- Movie Viewing Survey
- Music Listening Survey
- Neighborhood Feedback Survey
- Neighborhood Events Survey
- Neighborhood Survey
- Net Promoter Score Questionnaire Template
- Non-profit Organization Information Template
- NPS and Brand Loyalty Survey
- Online Social Networking Survey
- Parent Engagement Survey
- Parental Support Survey
- Personal Hygiene Questionnaire
- Post-Visit Patient Satisfaction Survey
- Pre K-12 Parent Survey Template
- Professional Event Feedback
- Real Estate Agent Evaluation
- Recruitment Satisfaction Survey
- Retail Customer Feedback
- RSVP and Contact Information Form
- School Climate Survey
- School Program Fit Questionnaire
- Employee Engagement Template
- Skin Care Products Feedback
- Smoking Survey
- Social Support Survey
- Software Evaluation
- Supervisor Performance Evaluation
- Target Market Analysis Questionnaire
- Target Market Demographics Questionnaire
- Team Performance Survey
- TV Viewing Survey
- Typical Customer Analysis Survey
- Typical Customer Demographics Survey
- University Faculty Satisfaction Survey
- University Instructor Evaluation
- University Student Graduation Form
- University Student Satisfaction Survey
- University Teaching Assistant Evaluation

## Aplicatie

**Enunt:** Creati o interfete pentru calcul marimi electrice:

-calculul rezistentelor si capacitatilor conectate in serie, respectiv paralel

-calcul in circuite electrice
