

Universitatea Tehnică din Cluj-Napoca
Facultatea de Inginerie Electrică

CURS Master

Tehnologii moderne de proiectare a aplicațiilor multimedia

Curs: **TEHNOLOGII MODERNE DE PROIECTARE A APLICAȚIILOR MULTIMEDIA**

CAP.7. LIMBAJUL PHP

CUPRINS

- 7.1. Introducere**
- 7.2. Sintaxa limbajului**
- 7.3. Elementele limbajului**
- 7.4. Exemple de aplicații PHP**

LIMBAJUL PHP

Limbajul PHP (Hypertext Preprocessor): cel mai popular limbaj de script pentru generarea de pagini HTML dinamice. Poate fi integrat în HTML.

Istoric PHP:

- ❑ conceput in 1994 de Rasmus Lerdorf.
- ❑ in prezent utilizat de aprox 244M domenii (<http://www.php.net/usage.php>)

Site oficial: <http://www.php.net>

LIMBAJUL PHP

Documentatii: manual

- ❑ <http://www.php.net/manual/en/>
- ❑ <http://us2.php.net/manual/en/index.php>

Tutoriale:

- ❑ PHP.net tutorial: <http://php.net/manual/en/tutorial.php>
- ❑ W3schools tutorial:
<http://www.w3schools.com/php/default.asp>

LIMBAJUL PHP

Apr 2018	Apr 2017	Change	Programming Language	Ratings	Change
1	1		Java	15.777%	+0.21%
2	2		C	13.589%	+6.62%
3	3		C++	7.218%	+2.66%
4	5	▲	Python	5.803%	+2.35%
5	4	▼	C#	5.265%	+1.69%
6	7	▲	Visual Basic .NET	4.947%	+1.70%
7	6	▼	PHP	4.218%	+0.84%
8	8		JavaScript	3.492%	+0.64%
9	-	▲	SQL	2.650%	+2.65%

LIMBAJUL PHP

AVANTAJE:

- simplicitate:** usor de invatat, accesibil ne-programatorilor. **Sintaxa similara limbajului C**
- eficienta:** un programator PHP poate folosi **module** scrise de un alt programator fara sa fie nevoit sa cunoasca detalii specifice de implementare a codului.
- cross-platform** : exista implementari ale limbajului pe **diverse sisteme de operare**, cele mai populare fiind cele de pe Linux si Windows. Un cod PHP care ruleaza pe Linux, poate fi ulterior folosit pe un server Windows .
- gratis** : PHP reprezinta un program **Open Source**, oricine poate folosi acest limbaj fara a fi nevoit sa plateasca.

SINTAXA LIMBAJ PHP

- ❑ scripturile scrise in limbajul PHP **pot fi editate cu orice editor de text**
- ❑ terminarea unei instructiuni se face obligatoriu cu caracterul **;**
- ❑ **numele functiilor NU SUNT «case Sensitive»** (nu se face diferenta intre litere mari/mici)
- ❑ **numele variabilelor SUNT Case Sensitive**
- ❑ ghilimelele se folosesc pereche **"..."** sau **'...'**
- ❑ **variabilele** sunt precedate de **\$**

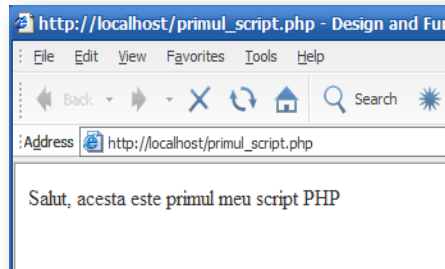

SINTAXA LIMBAJ PHP

Codul PHP poate aparea oriunde in fisierul HTML si este delimitat de 2 seturi de etichete de deschidere si inchidere:

```
<?php          sau   <script language="php"?>
...
?>              </script>
```

Ex.

```
<?php
echo 'Salut, acesta este primul meu script PHP';
// comentariu PHP
# comentariu PHP
?>
```

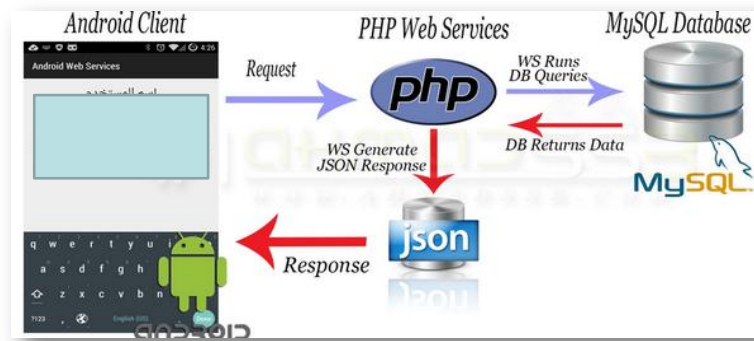

SINTAXA LIMBAJ PHP

<http://www.w3schools.com/php/>

PHP limbaj foarte puternic:

- ❑ cel mai mare sistem de blogging web (WordPress) bazat pe PHP
- ❑ cea mai mare retea sociala (Facebook) bazata pe PHP
- ❑ apps pentru dispozitive mobile

ELEMENTE LIMBAJ PHP

Elemente limbaj PHP:

- PHP Variables -se definesc cu \$
- PHP Echo / Print
- PHP Data Types
- PHP Strings
- PHP Constants
- PHP Operators
- PHP If...Else...Elseif
- PHP Switch
- PHP While Loops
- PHP For Loops
- PHP Functions
- PHP Arrays

```
<?php  
$txt = "Hello world!";  
$x = 5;  
$y = 10.5;  
?>
```

ELEMENTE LIMBAJ PHP

Elemente limbaj PHP:

PHP Variables

PHP Echo / Print -afisare date: variabile, constante, expresii

PHP Data Types

PHP Strings

PHP Constants

PHP Operators

PHP If...Else...Elseif

PHP Switch

PHP While Loops

PHP For Loops

PHP Functions

PHP Arrays

```
<?php
$txt1 = "Learn PHP";
$txt2 = "W3Schools.com";
$x = 5;
$y = 4;

echo "<h2>$txt1</h2>";
echo "Study PHP at $txt2<br>";
echo $x + $y;
?>
```

Learn PHP

Study PHP at W3Schools.com
9

ELEMENTE LIMBAJ PHP

Elemente limbaj PHP:

PHP Variables

PHP Echo / Print

PHP Data Types -Tipuri de date definite in PHP:

PHP Strings

PHP Constants

PHP Operators

PHP If...Else...Elseif

PHP Switch

PHP While Loops

PHP For Loops

PHP Functions

PHP Arrays

- String
- Integer
- Float (floating point numbers - also called double)
- Boolean
- Array
- Object
- NULL -valoare implicita de initializare a variabilelor
- Resource -apelare baza de date

ELEMENTE LIMBAJ PHP

Elemente limbaj PHP:

PHP Variables

PHP Echo / Print

PHP Data Types

PHP Strings

-siruri

PHP Constants

PHP Operators

PHP If...Else...Elseif

PHP Switch

PHP While Loops

PHP For Loops

PHP Functions

PHP Arrays

-functie lungime sir

```
<?php
echo strlen("Hello world!"); // outputs 12
?>
```

-functie nr cuvinte din sir

```
<?php
echo str_word_count("Hello world!"); // outputs 2
?>
```

-functie inversare sir

```
<?php
echo strrev("Hello world!"); // outputs !dlrow olleH
?>
```

Lista completa functii siruri: [PHP String Reference](#).

ELEMENTE LIMBAJ PHP

Elemente limbaj PHP:

PHP Variables

PHP Echo / Print

PHP Data Types

PHP Strings

PHP Constants

-constante

PHP Operators

PHP If...Else...Elseif

PHP Switch

PHP While Loops

PHP For Loops

PHP Functions

PHP Arrays

Sintaxa:

```
define(name, value, case-insensitive)
```

unde:

name: nume constanta

value: valoarea constantei

case-insensitive: arata daca nume constanta este case-insensitive sau nu. Implicit = false

Welcome to W3Schools.com!

```
<?php
define("GREETING", "Welcome to W3Schools.com!", true);
echo greeting;
?>
```

ELEMENTE LIMBAJ PHP

Elemente limbaj PHP:

- PHP Variables
- PHP Echo / Print
- PHP Data Types
- PHP Strings
- PHP Constants

PHP Operators -operatori

- PHP If...Else...Elseif
- PHP Switch
- PHP While Loops
- PHP For Loops
- PHP Functions
- PHP Arrays

- Arithmetic operators
- Assignment operators
- Comparison operators
- Increment/Decrement operators
- Logical operators
- String operators
- Array operators

Operator	Name	Example	Result
+	Addition	\$x + \$y	Sum of \$x and \$y
-	Subtraction	\$x - \$y	Difference of \$x and \$y
*	Multiplication	\$x * \$y	Product of \$x and \$y
/	Division	\$x / \$y	Quotient of \$x and \$y
%	Modulus	\$x % \$y	Remainder of \$x divided by \$y

ELEMENTE LIMBAJ PHP

Elemente limbaj PHP:

- PHP Variables
- PHP Echo / Print
- PHP Data Types
- PHP Strings
- PHP Constants

PHP Operators -operatori

- PHP If...Else...Elseif
- PHP Switch
- PHP While Loops
- PHP For Loops
- PHP Functions
- PHP Arrays

- Arithmetic operators
- Assignment operators
- Comparison operators
- Increment/Decrement operators
- Logical operators
- String operators
- Array operators

Assignment	Same as...	Description
x = y	x = y	The left operand gets set to the value of the expression on the right
x += y	x = x + y	Addition
x -= y	x = x - y	Subtraction
x *= y	x = x * y	Multiplication
x /= y	x = x / y	Division
x %= y	x = x % y	Modulus

ELEMENTE LIMBAJ PHP

Elemente limbaj PHP:

- PHP Variables
- PHP Echo / Print
- PHP Data Types
- PHP Strings
- PHP Constants
- PHP Operators -operatori**
- PHP If...Else...Elseif
- PHP Switch
- PHP While Loops
- PHP For Loops
- PHP Functions
- PHP Arrays

- Arithmetic operators
- Assignment operators
- Comparison operators**

Operator	Name	Example	Result
==	Equal	\$x == \$y	Returns true if \$x is equal to \$y
===	Identical	\$x === \$y	Returns true if \$x is equal to \$y, and they are of the same type
!=	Not equal	\$x != \$y	Returns true if \$x is not equal to \$y
<>	Not equal	\$x <> \$y	Returns true if \$x is not equal to \$y
!==	Not identical	\$x !== \$y	Returns true if \$x is not equal to \$y, or they are not of the same type
>	Greater than	\$x > \$y	Returns true if \$x is greater than \$y
<	Less than	\$x < \$y	Returns true if \$x is less than \$y
>=	Greater than or equal to	\$x >= \$y	Returns true if \$x is greater than or equal to \$y
<=	Less than or equal to	\$x <= \$y	Returns true if \$x is less than or equal to \$y

ELEMENTE LIMBAJ PHP

Elemente limbaj PHP:

- PHP Variables
- PHP Echo / Print
- PHP Data Types
- PHP Strings
- PHP Constants
- PHP Operators -operatori**
- PHP If...Else...Elseif
- PHP Switch
- PHP While Loops
- PHP For Loops
- PHP Functions
- PHP Arrays

- Arithmetic operators
- Assignment operators
- Comparison operators
- Increment/Decrement operators**
- Logical operators
- String operators
- Array operators

Operator	Name	Description
++\$x	Pre-increment	Increments \$x by one, then returns \$x
\$x++	Post-increment	Returns \$x, then increments \$x by one
--\$x	Pre-decrement	Decrements \$x by one, then returns \$x
\$x--	Post-decrement	Returns \$x, then decrements \$x by one

ELEMENTE LIMBAJ PHP

Elemente limbaj PHP:

- PHP Variables
- PHP Echo / Print
- PHP Data Types
- PHP Strings
- PHP Constants

PHP Operators

- PHP If...Else...Elseif
- PHP Switch
- PHP While Loops
- PHP For Loops
- PHP Functions
- PHP Arrays

- Arithmetic operators
- Assignment operators
- Comparison operators
- Increment/Decrement operators
- Logical operators
- String operators
- Array operators

Operator	Name	Example	Result
and	And	\$x and \$y	True if both \$x and \$y are true
or	Or	\$x or \$y	True if either \$x or \$y is true
xor	Xor	\$x xor \$y	True if either \$x or \$y is true, but not both
&&	And	\$x && \$y	True if both \$x and \$y are true
	Or	\$x \$y	True if either \$x or \$y is true
!	Not	!\$x	True if \$x is not true

- PHP If...Else...Elseif
- PHP Switch
- PHP While Loops
- PHP For Loops
- PHP Functions
- PHP Arrays

- Arithmetic operators
- Assignment operators
- Comparison operators
- Increment/Decrement operators
- Logical operators
- String operators
- **Array operators**

Operator	Name	Example	Result
+	Union	$\$x + \y	Union of $\$x$ and $\$y$
==	Equality	$\$x == \y	Returns true if $\$x$ and $\$y$ have the same key/value pairs
===	Identity	$\$x === \y	Returns true if $\$x$ and $\$y$ have the same key/value pairs in the same order and of the same types
!=	Inequality	$\$x != \y	Returns true if $\$x$ is not equal to $\$y$
<>	Inequality	$\$x <> \y	Returns true if $\$x$ is not equal to $\$y$
!==	Non-identity	$\$x !== \y	Returns true if $\$x$ is not identical to $\$y$

ELEMENTE LIMBAJ PHP

Elemente limbaj PHP:

I like Volvo, BMW and Toyota.

PHP Variables

PHP Echo / Print

PHP Data Types

PHP Strings

PHP Constants

PHP Operators

PHP If...Else...Elseif

PHP Switch

PHP While Loops

PHP For Loops

PHP Functions

```
<?php
```

```
$cars = array("Volvo", "BMW", "Toyota");  
echo "I like " . $cars[0] . ", " . $cars[1] . " and " . $cars[2] . ".";  
?>
```

Funcții de sortare enumerari:

- sort() - sort arrays in ascending order
- rsort() - sort arrays in descending order
- asort() - sort associative arrays in ascending order, according to the value
- ksort() - sort associative arrays in ascending order, according to the key
- arsort() - sort associative arrays in descending order, according to the value
- krsort() - sort associative arrays in descending order, according to the key

PHP Arrays -enumerari

EXEMPLE PHP: 1. Afisare text simplu

```
<!DOCTYPE html>  
<html>  
<body>  
  
<h1>My first PHP page</h1>  
  
<?php  
echo "Hello World!";  
?>  
  
</body>  
</html>
```

My first PHP page

Hello World!

EXEMPLE PHP: 2. Variabile case senzitive

```
<!DOCTYPE html>
<html>
<body>

<?php
$color = "red";
echo "My car is " . $color . "<br>";
echo "My house is " . $COLOR . "<br>";
echo "My boat is " . $coLOR . "<br>";
?>

</body>
</html>
```

My car is red
My house is
My boat is

Eroare
pentru ca

Numele variabilei =case sensitive

EXEMPLE PHP: 3.Comentarii+ afisare rezultat expresie

```
<!DOCTYPE html>
<html>
<body>

<?php
// This is a single-line comment

# This is also a single-line comment

/*
This is a multiple-lines comment block
that spans over multiple
lines
*/

// You can also use comments to leave out parts of a code line
$x = 5 /* + 15 */ + 5;
echo $x;
?>

</body>
</html>
```

10

EXEMPLE PHP: 4. Tiparire cu echo sau print

```
<!DOCTYPE html>
<html>
<body>

<?php
echo "<h2>PHP is Fun!</h2>";
echo "Hello world!<br>";
echo "I'm about to learn PHP!<br>";
echo "This ", "string ", "was ", "made
", "with multiple parameters.";
?>

</body>
</html>
```

PHP is Fun!
Hello world!
I'm about to learn PHP!
This string was made with multiple parameters.

```
<!DOCTYPE html>
<html>
<body>

<?php
print "<h2>PHP is Fun!</h2>";
print "Hello world!<br>";
print "I'm about to learn PHP!";
?>

</body>
</html>
```

PHP is Fun!
Hello world!
I'm about to learn PHP!

EXEMPLE PHP: 5. Siruri indexate

```
<!DOCTYPE html>
<html>
<body>

<?php
echo str_word_count("Hello world!");
?>

</body>
</html>
```

2

```
<!DOCTYPE html>
<html>
<body>

<?php
$cars = array("Volvo", "BMW", "Toyota");
$arrlength = count($cars);

for($x = 0; $x < $arrlength; $x++) {
    echo $cars[$x];
    echo "<br>";
}
?>

</body>
</html>
```

Volvo
BMW
Toyota

EXEMPLE PHP: 6.Siruri asociative

<pre><!DOCTYPE html> <html> <body> <?php \$age = array("Peter"=>"35", "Ben"=>"37", "Joe"=>"43"); echo "Peter is " . \$age['Peter'] . " years old."; ?> </body> </html></pre>	Peter is 35 years old.
---	------------------------

Cum se tiparesc toate valorile asociate elementelor sirului?

<pre><!DOCTYPE html> <html> <body> <?php \$age = array("Peter"=>"35", "Ben"=>"37", "Joe"=>"43"); foreach(\$age as \$x => \$x_value) { echo "Key=" . \$x . ", Value=" . \$x_value; echo "
"; } ?></pre>	Key=Peter, Value=35 Key=Ben, Value=37 Key=Joe, Value=43
---	---

EXEMPLE PHP: 7.Data calendaristica sistem

<pre><!DOCTYPE html> <html> <body> <?php echo "Today is " . date("Y/m/d") . "
"; echo "Today is " . date("Y.m.d") . "
"; echo "Today is " . date("Y-m-d") . "
"; echo "Today is " . date("l"); ?> </body> </html></pre>	Today is 2018/04/11 Today is 2018.04.11 Today is 2018-04-11 Today is Wednesday
--	---

<pre><!DOCTYPE html> <html> <body> <?php echo "The time is " . date("h:i:sa"); ?> </body> </html></pre>	The time is 06:33:15am
---	------------------------

LIMBAJUL PHP

Variabile globale – superglobals introduse din versiunea PHP 4.1.0

- \$GLOBALS
 - \$_SERVER
 - \$_REQUEST
 - **\$_POST**
 - **\$_GET**
 - \$_FILES
 - \$_ENV
 - \$_COOKIE
 - \$_SESSION
- utilizate pentru formulare on line in HTML5

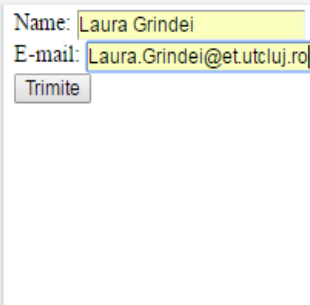

FORMULARE ON LINE – METODA HTTP POST

```
<!DOCTYPE HTML>
<html>
<body>

<form action="welcome.php" method="post">
Name: <input type="text" name="name"><br>
E-mail: <input type="text" name="email"><br>
<input type="submit">
</form>

</body>
</html>
```

Rezultat: datele completate sunt trimise prin metoda HTTP POST in fisierul *welcome.php* si browserul client afiseaza:

```
Welcome Laura Grindei
Your email address is: Laura.Grindei@et.utcluj.ro
```

FORMULAR ON LINE – METODA HTTP GET

<pre><!DOCTYPE HTML> <html> <body> <form action="welcome_get.php" method="get"> Name: <input type="text" name="name">
 E-mail: <input type="text" name="email">
 <input type="submit"> </form> </body> </html></pre>	Name: <input type="text" value="Laura Grindei"/> E-mail: <input type="text" value="Laura.Grindei@et.utcluj.ro"/> <input type="submit" value="Trimite"/>
--	---

Rezultat: datele completate sunt trimise prin metoda HTTP POST in fisierul "welcome_get.php" si browserul client afiseaza:

Welcome Laura Grindei
Your email address is: Laura.Grindei@et.utcluj.ro

FORMULARE ON LINE – ALEGEREA METODEI

Metoda HTTP GET se alege cand :

informațiile trimise dintr-un formular cu metoda GET sunt publice .

informatia trimisa prin formular : maxim 2000 caractere

Observatie: GET nu trebuie utilizat niciodată pentru trimiterea de parole sau alte informații sensibile!

Metoda HTTP POST este metoda mai des utilizata si se alege cand :

informațiile trimise cu metoda POST sunt invizibile pentru alții

informatia depaseste 2000 de caractere (nelimitat)

Observatie: POST e recomandata pentru trimiterea de parole sau alte informații sensibile

FORMULARE ON LINE – Validare formulare PHP

```
<?php
// define variables and set to empty values
$nameErr = $emailErr = $genderErr = $websiteErr = "";
$name = $email = $gender = $comment = $website = "";

if ($_SERVER["REQUEST_METHOD"] == "POST") {
    if (empty($_POST["name"])) {
        $nameErr = "Name is required";
    } else {
        $name = test_input($_POST["name"]);
    }

    if (empty($_POST["email"])) {
        $emailErr = "Email is required";
    } else {
        $email = test_input($_POST["email"]);
    }

    if (empty($_POST["website"])) {
        $website = "";
    } else {
        $website = test_input($_POST["website"]);
    }

    if (empty($_POST["comment"])) {
        $comment = "";
    } else {
        $comment = test_input($_POST["comment"]);
    }

    if (empty($_POST["gender"])) {
        $genderErr = "Gender is required";
    } else {
        $gender = test_input($_POST["gender"]);
    }
}
```

PHP Form Validation Example

* required field.

Name: *

E-mail: *

Website:

Comment:

Gender: Female Male *

Jane Doe
```

Operatii cu fisiere in PHP

Moduri de deschidere fisiere

Modes	Description
r	Open a file for read only. File pointer starts at the beginning of the file
w	Open a file for write only. Erases the contents of the file or creates a new file if it doesn't exist. File pointer starts at the beginning of the file
a	Open a file for write only. The existing data in file is preserved. File pointer starts at the end of the file. Creates a new file if the file doesn't exist
x	Creates a new file for write only. Returns FALSE and an error if file already exists
r+	Open a file for read/write. File pointer starts at the beginning of the file
w+	Open a file for read/write. Erases the contents of the file or creates a new file if it doesn't exist. File pointer starts at the beginning of the file
a+	Open a file for read/write. The existing data in file is preserved. File pointer starts at the end of the file. Creates a new file if the file doesn't exist
x+	Creates a new file for read/write. Returns FALSE and an error if file already exists

Funcții matematice predefinite in PHP

PHP 5 Math Functions

Function	Description
abs()	Returns the absolute (positive) value of a number
acos()	Returns the arc cosine of a number
acosh()	Returns the inverse hyperbolic cosine of a number
asin()	Returns the arc sine of a number
asinh()	Returns the inverse hyperbolic sine of a number
atan()	Returns the arc tangent of a number in radians
atan2()	Returns the arc tangent of two variables x and y
atanh()	Returns the inverse hyperbolic tangent of a number
base_convert()	Converts a number from one number base to another
bindec()	Converts a binary number to a decimal number
ceil()	Rounds a number up to the nearest integer
cos()	Returns the cosine of a number
cosh()	Returns the hyperbolic cosine of a number

Functii matematice predefinite in PHP

<code>cosh()</code>	Returns the hyperbolic cosine of a number
<code>decbin()</code>	Converts a decimal number to a binary number
<code>dechex()</code>	Converts a decimal number to a hexadecimal number
<code>decoct()</code>	Converts a decimal number to an octal number
<code>deg2rad()</code>	Converts a degree value to a radian value
<code>exp()</code>	Calculates the exponent of e
<code>expm1()</code>	Returns $\exp(x) - 1$
<code>floor()</code>	Rounds a number down to the nearest integer
<code>fmod()</code>	Returns the remainder of x/y
<code>getrandmax()</code>	Returns the largest possible value returned by <code>rand()</code>
<code>hexdec()</code>	Converts a hexadecimal number to a decimal number
<code>hypot()</code>	Calculates the hypotenuse of a right-angle triangle
<code>is_finite()</code>	Checks whether a value is finite or not
<code>is_infinite()</code>	Checks whether a value is infinite or not
<code>is_nan()</code>	Checks whether a value is 'not-a-number'

<code>lcg_value()</code>	Returns a pseudo random number in a range between 0 and 1
<code>log()</code>	Returns the natural logarithm of a number
<code>log10()</code>	Returns the base-10 logarithm of a number
<code>log1p()</code>	Returns $\log(1+\text{number})$
<code>max()</code>	Returns the highest value in an array, or the highest value of several specified values
<code>min()</code>	Returns the lowest value in an array, or the lowest value of several specified values
<code>mt_getrandmax()</code>	Returns the largest possible value returned by <code>mt_rand()</code>
<code>mt_rand()</code>	Generates a random integer using Mersenne Twister algorithm
<code>mt_srand()</code>	Seeds the Mersenne Twister random number generator
<code>octdec()</code>	Converts an octal number to a decimal number
<code>pi()</code>	Returns the value of PI
<code>pow()</code>	Returns x raised to the power of y
<code>rad2deg()</code>	Converts a radian value to a degree value
<code>rand()</code>	Generates a random integer
<code>round()</code>	Rounds a floating-point number
<code>sin()</code>	Returns the sine of a number
<code>sinh()</code>	Returns the hyperbolic sine of a number

Funcții matematice predefinite în PHP

<code>sqrt()</code>	Returns the square root of a number
<code>srand()</code>	Seeds the random number generator
<code>tan()</code>	Returns the tangent of a number
<code>tanh()</code>	Returns the hyperbolic tangent of a number

Constante matematice predefinite în PHP

PHP 5 Predefined Math Constants

Constant	Value	Description	PHP Version
INF	INF	The infinite	PHP 4
M_E	2.7182818284590452354	Returns e	PHP 4
M_EULER	0.57721566490153286061	Returns Euler constant	PHP 4
M_LNPI	1.14472988584940017414	Returns the natural logarithm of Pi: $\log_e(\pi)$	PHP 5.2
M_LN2	0.69314718055994530942	Returns the natural logarithm of 2: $\log_e 2$	PHP 4
M_LN10	2.30258509299404568402	Returns the natural logarithm of 10: $\log_e 10$	PHP 4
M_LOG2E	1.4426950408889634074	Returns the base-2 logarithm of E: $\log_2 e$	PHP 4
M_LOG10E	0.43429448190325182765	Returns the base-10 logarithm of E: $\log_{10} e$	PHP 4
M_PI	3.14159265358979323846	Returns Pi	PHP 4
M_PI_2	1.57079632679489661923	Returns $\pi/2$	PHP 4
M_PI_4	0.78539816339744830962	Returns $\pi/4$	PHP 4
M_1_PI	0.31830988618379067154	Returns $1/\pi$	PHP 4
M_2_PI	0.63661977236758134308	Returns $2/\pi$	PHP 4
M_SQRTPI	1.77245385090551602729	Returns the square root of Pi: $\sqrt{\pi}$	PHP 5.2
M_2_SQRTPI	1.12837916709551257390	Returns 2/square root of Pi: $2/\sqrt{\pi}$	PHP 4
M_SQRT1_2	0.70710678118654752440	Returns the square root of 1/2: $1/\sqrt{2}$	PHP 4
M_SQRT2	1.41421356237309504880	Returns the square root of 2: $\sqrt{2}$	PHP 4

Constanta matematice predefinite in PHP

M_SQRT3	1.73205080756887729352	Returns the square root of 3: sqrt(3)	PHP 5.2
NAN	NAN	Not A Number	PHP 4
PHP_ROUND_HALF_UP	1	Round halves up	PHP 5.3
PHP_ROUND_HALF_DOWN	2	Round halves down	PHP 5.3
PHP_ROUND_HALF_EVEN	3	Round halves to even numbers	PHP 5.3
PHP_ROUND_HALF_ODD	4	Round halves to odd numbers	PHP 5.3

Validare cod PHP on line

- [PHP Sandbox, test PHP online, PHP tester](#) ↗
- [Write Code Online - PHP | start write and run php code online](#) ↗
- [eval.in](#) ↗
- [Execute PHP Script Online](#) ↗
- [Nitrous.IO](#) ↗

Validare cod PHP on line Sandbox

Your script:

```
1 <?php
2 //Enter your code here, enjoy!
3
4 $array = array("1" => "PHP code tester Sandbox Online",
5               "foo" => "bar", 5, 5 => 89009,
6               "case" => "Random Stuff: " . rand(100,999),
7               "PHP Version" => phpversion()
8               );
9
10 foreach( $array as $key => $value ){
11     echo $key."\t=>\t".$value."\n";
12 }
13
14
```

Result:

```
1 => PHP code tester Sandbox Online
foo => bar
2 => 5
5 => 89009
case => Random Stuff: 644
PHP Version => 7.0.3
```

Run on PHP version:

Output:

Execute code

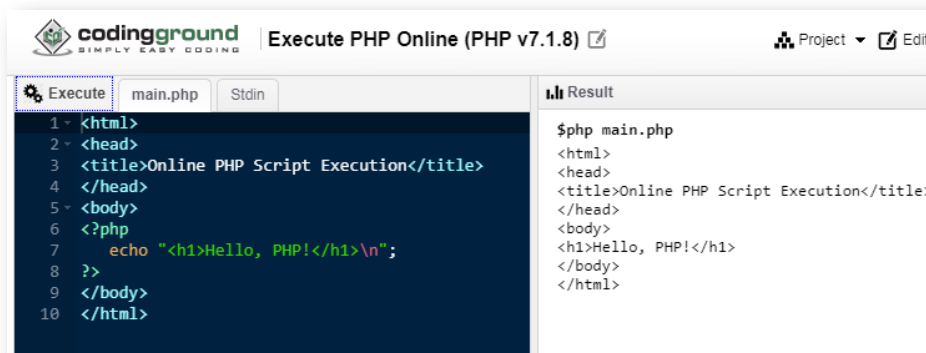

Save or share your code

Validare cod PHP on line: Write php online

Validare cod PHP on line: Codingground

Aplicatii complexe PHP

1. E-Commerce
2. **Graphical User Interface: desktop GUI** applications utilizand **PHP extensions**:
 - [PHP GTK](#) - extensie populara open source pentru implementare GIMP toolkit (grafica)
 - [ZZEE PHP GUI](#) - solutie comerciala care converteste scripturi PHP in aplicatii Windows
3. **Forum de discutii**
 - [php BB](#)
 - [vBulletin](#)
 - [Pun BB](#)
4. **Aplicatii Facebook**
 - [Facebook developer's wiki](#)
5. **Liste de email : Mailing Lists**
6. **PHP Photo Gallery**
7. **CMS**:
 - [Drupal](#)
 - [Wordpress](#), [Joomla](#)
8. **Grafice web: PHPChart**

Aplicatii de SBD cu arhitectura client-server

Arhitectura client-server a SBD: model cu 2 componente distincte:

- Server (backend)**: are instalate SGBD-ul ,BD si server de PHP, etc; proceseaza si returneaza rezultatul cererilor de la clienti
- Client (frontend)**: are instalate programe de aplicatie:
 - un program „dedicat” (specific BD) sau
 - un **browser** (Chrome, Internet Explorer, etc): interacționează cu BD printr-o interfață software (HTML + PHP, ASP, Java, JavaScript, VBScript, etc...)

Arhitectura client-server & aplicatii web

SGBD cu arhitectura client-server

Clasificare SGBD dupa accesul la BD:

- ❑ **BD „monolitice”**: motorul BD și interfața se află pe același calculator, sunt BD de talie și performanțe reduse.

Ex. Windows: Microsoft Access, Fox Pro, etc.

Linux: (în general, Open Source) PostgreSQL, etc.

- ❑ **BD „client – server”**: motorul BD și interfața se află pe calculatoare diferite, sunt BD de talie și performanțe considerabile.

Ex. MySQL, ORACLE, Microsoft SQL SERVER, IBM DB2, INFORMIX, etc

Arhitectură Client – Server MySQL - PHP

Proiectarea paginilor web dinamice

Pagini web dinamice: conținut dinamic , poate diferi la accesări diferite asigura interactivitatea si interactiunea intre clienti si server

Ex: la același URL conținutul paginii poate varia în funcție de anumiți parametri cum ar fi locația geografică a utilizatorului, ora, paginile vizitate anterior, profilul utilizatorului;

Clasificare pagini web dinamice:

- pagini dinamice pe parte de client ("Client Side")
- pagini dinamice pe partea de server("Server Side").

Pagini Web Dinamice “Client Side”

Tehnologii pentru realizarea paginilor dinamice pe partea de client:

- scripturi pe partea de client** (“client side scripts “): asigurarea interactivitate : meniuri, formulare, creerea de efecte speciale, efectuarea de calcule, animație, etc. Limbaje utilizate: JavaScript, Jscript și VBScript.
- DHTML (“ Dynamic HTML “):** tehnologie dezvoltată de Microsoft care combină HTML, foi de stiluri (CSS) și script-uri pentru realizarea paginilor web dinamice sau interactive.
- applet-uri Java:** aplicații de dimensiune redusă, in limbajul Java (instalare masina virtuala Java).
- controale ActiveX:** componente binare incluse în paginile Web pentru a oferi interactivitate, rulează pe platforma Windows
- elemente multimedia:** realizate in general cu Adobe Flash (instalare plug-in) pentru meniuri, jocuri, animatie

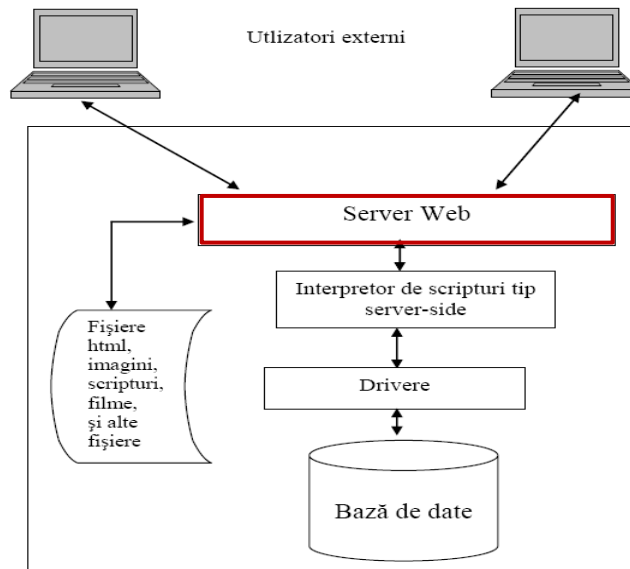

Pagini Web Dinamice “Server Side”

Arhitectura server :

- serverul Web,
- interpretorul de scripturi tip server-side,
- driverele de acces la baza de date,
- baza de date și colecțiile de fișiere.

Arhitectura server Web cu suport de scripting

PAGINI WEB DINAMICE "SERVER SIDE"

Server web

Server web: aplicație complexă responsabilă pentru comunicarea cu browserele externe.

Informațiile solicitate de la server = fișiere:

- Fișiere statice: se transmit mai departe către browsere fără nici o modificare. Ex: imagini, fișiere HTML, filme, fișiere pentru download, animații Flash etc.
- Fișiere script: programe simple executate de către un interpretor, trimițându-se spre server-ul de Web doar rezultatul execuției lor. Tehnica generării dinamice a documentelor de tip HTML face posibilă accesarea bazelor de date pe Internet.

Arhitectura server Web cu suport de scripting

PAGINI WEB DINAMICE “SERVER SIDE”

Interpretor de scripturi tip server-side

Interpretor de scripturi tip server-side: executa scripturi la cererea serverului de Web, preia rezultatul unor interogări la nivelul BD și trimite spre serverul Web rezultatul execuției scripturilor = conținut HTML pentru afisare in browser.

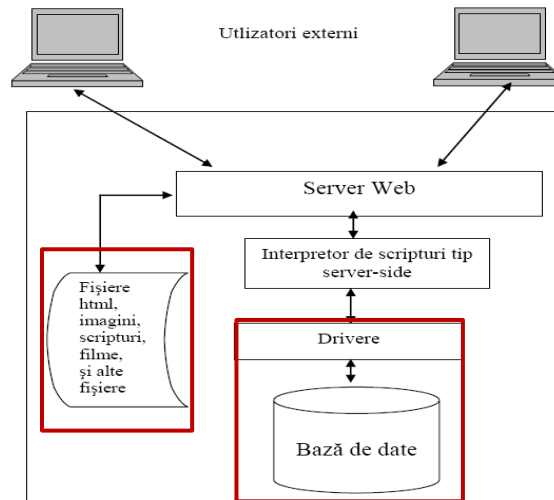

Identificare script: extensia fișierului .

Limbaje server-side scripting:

- PHP (Hypertext Preprocessor),
- ASP (Active Server Pages), ASP.NET,
- JSP (Java Server Pages),
- Ruby.

Arhitectura server Web cu suport de scripting

PAGINI WEB DINAMICE “SERVER SIDE”

Driver. Baza de date

Driver de acces la BD: intermediaza interacțiunea dintre interpretorul de scripturi și BD; sunt instrumente software specializate care nu sunt vizibile nici programatorului nici utilizatorului.

Baza de date: constă dintr-un SGBDR instalat fie pe același calculator cu serverul Web, fie este accesibil prin rețea sau Internet.

Ex:

- MySQL, SQL Server, Oracle
- Fox Pro și Access nu se pretează pentru BD web folosite intens.

Fișiere: informații cu caracter static trimise utilizatorilor la cerere

SGBD MySQL

MySQL : SGBD foarte rapid si robust permite accesul multi-user si multi-thread (mai multe fire de executie). Utilizeaza limbajul SQL.

Istoric MySQL:

- apare in 1979
- disponibil public din 1996

Adresa web MySQL: <http://www.mysql.com>

Caracteristici generale:

- gratuit
- Open Source, dar si cu licente comerciale.

PHP si MySQL

PHP 5 (si versiunile ulterioare) se conecteaza cu baze de date MySQL prin:

- ❑ **extensia MySQLi** ("i" de la improved): permite conectarea doar cu BD MySQL in 2 moduri:
 - Object Oriented si
 - Procedural)

<http://php.net/manual/en/mysqli.installation.php>

- ❑ **PDO (PHP Data Objects)**: permite conectarea cu 12 tipuri diferite de BD

<http://php.net/manual/en/pdo.installation.php>

Deschidere conexiune la BD MySQL cu MySQLi Object-Oriented

```
<?php
$servername = "localhost";
$username = "username";
$password = "password";

// Create connection
$conn = new mysqli($servername, $username, $password);

// Check connection
if ($conn->connect_error) {
    die("Connection failed: " . $conn->connect_error);
}
echo "Connected successfully";
?>
```

Inchidere conexiune

```
$conn->close();
```

Deschidere conexiune la BD MySQL cu MySQLi Procedural

```
<?php
$servername = "localhost";
$username = "username";
$password = "password";

// Create connection
$conn = mysqli_connect($servername, $username, $password);

// Check connection
if (!$conn) {
    die("Connection failed: " . mysqli_connect_error());
}
echo "Connected successfully";
?>
```

Inchidere conexiune

```
mysqli_close($conn);
```

Deschidere conexiune PHP la BD MySQL cu PDO

```
<?php
$servername = "localhost";
$username = "username";
$password = "password";

try {
    $conn = new PDO("mysql:host=$servername;dbname=myDB", $username, $password);
    // set the PDO error mode to exception
    $conn->setAttribute(PDO::ATTR_ERRMODE, PDO::ERRMODE_EXCEPTION);
    echo "Connected successfully";
}
catch(PDOException $e)
{
    echo "Connection failed: " . $e->getMessage();
}
?>
```

Inchidere conexiune

```
$conn = null;
```

Creare BD utilizand PHP si MySQLi Object-oriented

```
<?php
$servername = "localhost";
$username = "username";
$password = "password";

// Create connection
$conn = new mysqli($servername, $username, $password);
// Check connection
if ($conn->connect_error) {
    die("Connection failed: " . $conn->connect_error);
}

// Create database
$sql = "CREATE DATABASE myDB";
if ($conn->query($sql) === TRUE) {
    echo "Database created successfully";
} else {
    echo "Error creating database: " . $conn->error;
}

$conn->close();
?>
```

Exemplu creare tabel in BD utilizand PHP si MySQLi Object-orient

Se creeaza un tabel "MyGuests",
cu 5 coloane:

1. "id",
2. "firstname",
3. "lastname",
4. "email" si
5. "reg_date":

```
<?php
$servername = "localhost";
$username = "username";
$password = "password";
$dbname = "myDB";

// Create connection
$conn = new mysqli($servername, $username, $password, $dbname);
// Check connection
if ($conn->connect_error) {
    die("Connection failed: " . $conn->connect_error);
}

// sql to create table
$sql = "CREATE TABLE MyGuests (
id INT(6) UNSIGNED AUTO_INCREMENT PRIMARY KEY,
firstname VARCHAR(30) NOT NULL,
lastname VARCHAR(30) NOT NULL,
email VARCHAR(50),
reg_date TIMESTAMP
)";

if ($conn->query($sql) === TRUE) {
    echo "Table MyGuests created successfully";
} else {
    echo "Error creating table: " . $conn->error;
}
```

Exemplu inserare date in BD utilizand PHP si MySQLi Object-oriented

```
// Create connection
$conn = new mysqli($servername, $username, $password, $dbname);
// Check connection
if ($conn->connect_error) {
    die("Connection failed: " . $conn->connect_error);
}

$sql = "INSERT INTO MyGuests (firstname, lastname, email)
VALUES ('John', 'Doe', 'john@example.com')";

if ($conn->query($sql) === TRUE) {
    echo "New record created successfully";
} else {
    echo "Error: " . $sql . "<br>" . $conn->error;
}
```

Exemplu inserare multipla date in BD utilizand PHP si MySQLi Object-oriented

```
$sql = "INSERT INTO MyGuests (firstname, lastname, email)
VALUES ('John', 'Doe', 'john@example.com');";
$sql .= "INSERT INTO MyGuests (firstname, lastname, email)
VALUES ('Mary', 'Moe', 'mary@example.com');";
$sql .= "INSERT INTO MyGuests (firstname, lastname, email)
VALUES ('Julie', 'Dooley', 'julie@example.com');";
```

```
if ($conn->multi_query($sql) === TRUE) {
    echo "New records created successfully";
} else {
    echo "Error: " . $sql . "<br>" . $conn->error;
}
```

Exemplu interogare date in BD cu SELECT utilizand PHP si MySQLi Object-oriented

```
<?php
$servername = "localhost";
$username = "username";
$password = "password";
$dbname = "myDB";

// Create connection
$conn = new mysqli($servername, $username, $password, $dbname);
// Check connection
if ($conn->connect_error) {
    die("Connection failed: " . $conn->connect_error);
}

$sql = "SELECT id, firstname, lastname FROM MyGuests";
$result = $conn->query($sql);

if ($result->num_rows > 0) {
    // output data of each row
    while($row = $result->fetch_assoc()) {
        echo "id: " . $row["id"]. " - Name: " . $row["firstname"]. " " . $row["lastname"]. "
    <br>";
    }
} else {
    echo "0 results";
}
$conn->close();
?>
```

Rezultate afisate

id: 1 - Name: John Doe
id: 2 - Name: Mary Moe
id: 3 - Name: Julie Dooley

Exemplu stergere date din BD cu DELETE utilizand PHP si MySQLi Object-oriented

Fie tabelul "MyGuests": se sterge al 3-lea articol/linie

id	firstname	lastname	email	reg_date
1	John	Doe	john@example.com	2014-10-22 14:26:15
2	Mary	Moe	mary@example.com	2014-10-23 10:22:30
3	Julie	Dooley	julie@example.com	2014-10-26 10:48:23

```
// Create connection
$conn = new mysqli($servername, $username, $password, $dbname);
// Check connection
if ($conn->connect_error) {
    die("Connection failed: " . $conn->connect_error);
}
```

```
// sql to delete a record
$sql = "DELETE FROM MyGuests WHERE id=3";

if ($conn->query($sql) === TRUE) {
    echo "Record deleted successfully";
} else {
    echo "Error deleting record: " . $conn->error;
}
```

Exemplu modificare date din BD cu UPDATE utilizand PHP si MySQLi Object-oriented

Fie tabel "MyGuests": se modifica campul lastname pentru articolul 2 in Doe

id	firstname	lastname	email	reg_date
1	John	Doe	john@example.com	2014-10-22 14:26:15
2	Mary	Moe	mary@example.com	2014-10-23 10:22:30

```
$sql = "UPDATE MyGuests SET lastname='Doe' WHERE id=2";

if ($conn->query($sql) === TRUE) {
    echo "Record updated successfully";
} else {
    echo "Error updating record: " . $conn->error;
}
```

Rezultat

id	firstname	lastname	email	reg_date
1	John	Doe	john@example.com	2014-10-22 14:26:15
2	Mary	Doe	mary@example.com	2014-10-23 10:22:30
